DOWNSTREAM PARCELS REMOVAL ACTION
CONSTRUCTION CERTIFICATION REPORT
GM CET BEDFORD FACILITY
BEDFORD, INDIANA

Parcel	*Delineation and Verification Samples Collected*	*Quantity of Soil Excavated (tons) 1*	*Quantity of Soil Backfilled (tons)2,3*
13	103	2,486	-
15	516	13,522	6,300
20	437	31,747	-
21	171	8,035	1,350
216	221	5,879	2,550
23	355	17,441	-
24	66	6,467	5,100
76	110	1,764	-
78	22	3,919	-
25	811	57,026	12,150
28	948	141,488	-
29	48	1,372	7,200
30	782	104,646	59,550
36	2,272	491,877	250,800
72	24	392	300
37	137	7,447	-
38	480	7,447	-
39	3,703	478,159	-
40	1,546	141,488	38,100
81	82	11,758	7,350
Total	**12,834**	**1,534,358**	**390,750**

Notes:

1. Estimate based on actual tonnages from disposal log and volume place in East Plant Area. Sources listed in log with combined waste sources (i.e. waste sourced from multiple parcels) were distributed using an average weighted using the estimated volume removed (see Note 2).
2. Volume Estimate calculated from final excavation survey data and restoration survey data using AutoCAD Civil 3D®. Assumed 1.5 tons per cubic yard.
3 Only GM LLC owned and third-party properties included in totals.

Tree Replacement Plans

3/12/04

Attachment A

~~Tree Replacement Plan~~

For each tree removed as a result of the Removal Action work on the Property which has a diameter of 3 inches or more, GM will replace each of such trees with a seedling selected from the list below; however, if feasible, at least 5 different varieties shall be selected. All replacement trees will be monitored for a period of 3 years. If at the end of the monitoring period the number of surviving trees and any volunteers which have established themselves since the completion of the replanting program is less than the number of trees replanted, then to the extent of such difference GM shall replant seedlings selected in the manner described above.

Common Name	Scientific Name	Comments
Box Elder	*Acer negundo*	Fast growing/wet habitat
Red Maple	*Acer rubrum*	Relatively Fast growing/wet habitat
Silver Maple	*Acer saccharinum*	Fast growing/moist soil
Shellbark Hickory	*Carya lacinosa*	Slow growing/bottomland
Bitternut Hickory	*Carya cordiformis*	
Green Ash	*Fraxinus pennsylvanicus*	Moderately fast growing/moist soil
Black Walnut	*Juglans nigra*	Slow growing/well-drained soil
Sweet Gum	*Liquidambar styraciflua*	Fast growing/moist bottomland soil
Blackgum	*Nyssa sylvatica*	Tolerates short-term flooding
American Sycamore	*Platanus occidentalis*	Fast growing/bottomland soil
Black Cherry	*Prunus serotina*	Moderate rainfall/well-drained soil
Shingle Oak	*Quercus imbricaria*	
Shumard Oak	*Quercus shumardii*	Moist, well drained soil
Bur Oak	*Quercus macrocarpa*	Moist soil/intolerant of flooding
Pin Oak	*Quercus palustris*	Wet bottomland habitat

Sweet Gum	*Liquidambar styraciflua*	Fast growing/moist bottomland soil
Blackgum	*Nyssa sylvatica*	Tolerates short-term flooding
American Sycamore	*Platanus occidentalis*	Fast growing/bottomland soil
Black Cherry	*Prunus serotina*	Moderate rainfall/well-drained soil
Shingle Oak	*Quercus imbricaria*	
Shumard Oak	*Quercus shumardii*	Moist, well drained soil
Bur Oak	*Quercus macrocarpa*	Moist soil/intolerant of flooding
Pin Oak	*Quercus palustris*	Wet bottomland habitat

Appendix C

Rule 5 Erosion Control Plan Termination Notice

LAWRENCE COUNTY
soil and water conservation
DISTRICT

Serving Lawrence County since 1957

1919 Steven Ave., Bedford, IN 47421
812-279-8117, Ext. 3 Fax 812-279-1394

www.lawrencecountyswcd.org

September 16, 2013

Subject: Rule 5 Notice of Termination

Enclosed you will find an on-site evaluation for erosion and sediment control and a NOT; a notice of termination which is from work done at your location. This is just merely to state that the Rule 5 plan was completed satisfactorily and we want to terminate from our books and IDEM's paperwork.

We ask that you sign where we have marked inside the enclosed paper work and return back to Lawrence County SWCD in the enclosed stamped envelope. At that time this project will be completed and all paper work completed with the district and IDEM as well.

Thank you for your assistance in this last step.

Sincerely,

Whitney Baldwin
Lawrence County SWCD Technician/Educator
1919 Steven Ave
Bedford, In 47421
812-279-8117 Ext. 3

ALL PROGRAMS AND SERVICES OF THE LAWRENCE COUNTY SOIL & WATER CONSERVATION DISTRICT ARE OFFERED ON A NONDISCRIMINATORY BASIS, WITHOUT REGARD TO RACE, COLOR, NATIONAL ORIGIN, RELIGION, AGE, DISABILITY, POLITICAL BELIEFS, SEXUAL ORIENTATION, SEX, MARITAL /FAMILY STATUS OR HANDICAP.

ON-SITE EVALUATION FOR EROSION AND SEDIMENT CONTROL

Date: 9-11-2013 County: Lawrence

Project Name: East Plant Area Cover System

Present at Site: Whitney Baldwin(SWCD) ,Dan Perez (IDEM Storm Water Specialist)

TYPE OF EVALUATION: ☐ **Initial** ☒ **Routine** ☐ **Follow-up** ☐ **Complaint**

This evaluation is intended to assess the level of compliance with 327 IAC 15-5 (Rule 5). It is also intended to identify areas where additional measures may be required to control erosion and sedimentation. All practices recommended in this report should be evaluated as to their feasibility by a qualified individual, with structural practices designed by a qualified engineer.
All erosion and sediment control measures shall meet the design criteria, standards, and specifications outlined in the "Indiana Handbook for Erosion Control in Developing Areas" or similar guidance documents.

Current Site Information: Final Site vist- area is stable. NOT needs signed and returned

The Following Items Have Been Evaluated and Assigned a Designation of:

S = Satisfactory M = Marginal U = Unsatisfactory NA = Not Applicable

Construction Site Management for Erosion and Sediment Control

S	M	U	NA	
☒	☐	☐	☐	**(1)** Disturbed areas have been adequately protected through seeding or other appropriate erosion and sediment control measures.
☐	☐	☐	☒	**(2)** Appropriate perimeter sediment control measures have been implemented.
☒	☐	☐	☐	**(3)** Conveyance channels have been stabilized or protected with appropriate sediment control measures.
☒	☐	☐	☐	**(4)** Erosion & sediment control measures are installed properly.
☒	☐	☐	☐	**(5)** Storm drain inlets have been adequately protected.
☒	☐	☐	☐	**(6)** Outlets have been adequately stabilized.
☐	☐	☐	☒	**(7)** Existing erosion & sediment control measures are being maintained.
☒	☐	☐	☐	**(8)** Public & private roadways are being kept clear of accumulated sediment or tracked soil.
☐	☐	☐	☒	**(9)** Erosion & sediment control measures have been installed and maintained on individual building sites.

Status of Sediment Retention On-Site

☐ Site conditions present a high potential for off-site sedimentation.
Describe:

_____

☐ There is evidence of off-site sedimentation.
Describe:

_____

☒ **Please Refer to the Comments Section of this Report**

Compiled By: Whitney Baldwin, Lawrence County Soil & Water Conservation District, 1919 Steven Ave., Bedford, IN 47421

Definitions

Satisfactory:	The item is currently in compliance with the Rule
Marginal:	A concern has been identified; corrective action is strongly recommended to remain in compliance
Unsatisfactory:	A violation has been identified and the site is not in compliance; corrective action is required
Not Applicable:	Does not apply at this stage of construction.

ON-SITE EVALUATION FOR EROSION AND SEDIMENT CONTROL

COMMENTS

PROJECT NAME: East Plant Area Cover System Date: 9/11/2013

This report was provided to:

Questions or comments concerning this report should be directed to: **Note: Email is the preferred method of contact due to limited phone availability while in the field.**
EMAIL Whitney Baldwin at:
whitney.baldwin@in.nacdnet.net

The items checked below must be corrected prior to **n/a**, unless otherwise noted.

- ☐ Install an appropriate sediment control practice between construction areas and lower lying areas. _____
- ☐ Replace/Repair silt fence and/or straw bale barriers. _____
- ☐ Entrench silt fence (6-8 in.) and/or straw bale barriers (4 –6 in.) and stake straw bales. _____
- ☐ Remove accumulated sediment from: ☐ sediment traps/basins, ☐ behind silt fence/straw bales, ☐ around storm drain inlet protection devices, ☐ streets and gutters (Do not flush with water) _____
- ☐ Temporary seed, fertilize, and/or mulch: _____
- ☐ Permanent seed, fertilize, and mulch areas that are at final grade: _____
- ☐ Protect storm drain inlets: ☐ curb inlets, ☐ drop inlets _____
- ☐ Reshape and stabilize side slopes of: ☐ sediment traps/basins, ☐ detention/retention basins _____
- ☐ Install/Maintain construction entrance(s): _____
- ☐ Reshape and stabilize conveyance channels: _____
- ☐ Place greater emphasis on erosion and sediment control on building sites; contractors, subcontractors, material vendors, and others should be made aware of erosion and sediment control requirements. Appropriate perimeter sediment controls (e.g. silt fence) and stable construction entrances shall be utilized on all sites. Sediment tracked into the street shall be removed (do not flush with water) at the end of each workday. _____
- ☐ Other Requirements:
  Post the N.O.I., (Notice of Intent), including project name, owner contact information, and other information as required by 327 IAC 15-5-7 (b) (6) at the entrance to the construction site.

RULE 5 – NOTICE OF TERMINATION (NOT)

State Form 51514 (R2 / 4-10)
INDIANA DEPARTMENT OF ENVIRONMENTAL MANAGEMENT
OFFICE OF WATER QUALITY

For questions regarding the requirements for project termination or completion of this form, contact:

Indiana Department of Environmental Management
Storm Water, Permits Coordinator
100 North Senate Avenue
MC 65-42, Room 1255
Indianapolis, Indiana 46204-2251
Telephone (317) 233-1864 or
(800) 451-6027(*within Indiana*), ext. 31864
Web Access: http://www.IN.gov/idem/4902.htm

Note: Submission of this Notice of Termination letter is a certification by the project site owner that the project meets the terms and conditions of the General Permit Rule 327 IAC 15-5 (Rule 5, Storm Water Discharges Associated with Construction Activity) for termination of permit coverage under the National Pollutant Discharge Elimination System (NPDES).

PROJECT NAME AND LOCATION

Permit number INR106249
(Note: Permit numbers were assigned to projects beginning in November of 2003. Therefore, a permit number is only applicable for those projects that began or were renewed on or after November of 2003).

Project name East Plant Area Cover System *(Note: Provide the project name as it appears on the active "Notice of Intent")*	**County** Lawrence
Company name General Motors	
Project site owner's name (*an individual*) Cheryl Haiatt	
Address (*number and street*) 2000 Centerpoint Parkway Mail Code-483-753-190 , 1st floor Cobalt Station	

City Pontiac	**State** MI	**ZIP code** 48341
Telephone 248-753-5799 **FAX**	**E-mail address** (*if available*) cheryl.r.hiatt@gm.com	

THIS "NOTICE OF TERMINATION" IS BEING SUBMITTED FOR THE FOLLOWING

To be eligible for termination, specific criteria must be met. There are three options for which a project may be considered for termination. These options include:

- Option # 1 Certification for change of ownership;
- Option # 2 Certification for termination of construction activities *(327 IAC 15-8)*; and,
- Option # 3 Notice of termination to obtain early release from compliance with 327 IAC 15-5 (327 IAC 15-8).

Select one of the three options that apply to "Permit Termination" by checking the appropriate box, complete all information associated with that option, include required attachments (where applicable), and complete the "Project Site Owner Responsibility Statement" on page 2 of this form.

☐ **Option # 1 Certification for change of ownership**

This option does not apply to the sale of individual lots within the permitted acreage; only the sale of the entire project site as originally permitted. The agency may accept termination for entire sections or phases of a project that are sold. To determine if a project is eligible, please contact the IDEM Storm Water Permits Coordinator.

By signing this "Notice of Termination" , I certify the following:

A. **The project was sold**; I am no longer the project site owner as was designated in my "Notice of Intent". The new owner of the project site is:

Company name (*If applicable*)

Project site owner's name (*An individual*)

Address (*number and street*)

City **State** **ZIP code**

Telephone number **FAX** **E-mail Address** (*If available*)

B. I have notified the new project site owner of his/her responsibilities to comply with 327 IAC 15-5 and the requirements associated with the rule including filing a new "Notice of Intent."

☒ **Option # 2 Certification for termination of construction activities**

By signing this "Notice of Termination", I certify the following:

A. All land disturbing activities, including construction on all building lots, have been completed and the entire site has been stabilized;
B. All temporary erosion and sediment control measures have been removed; and
C. No future land disturbing activities will occur at the project site.

(Continued on reverse side)

☐ **Option # 3 "Notice of Termination" to obtain early release from compliance with 327 IAC 15-5**

By signing this "Notice of Termination," I certify the following:

A. The remaining, undeveloped acreage does not exceed five (5) acres, with contiguous areas not to exceed one (1) acre.
B. A map of the project site, clearly identifying all remaining undeveloped lots, is attached to this letter. The map must be accompanied by a list of names and addresses of individual lot owners or individual lot operators of all undeveloped lots.
C. All public and common improvements, including infrastructure, have been completed and permanently stabilized and have been transferred to the appropriate local entity.
D. The remaining acreage does not pose a significant threat to the integrity of the infrastructure, adjacent properties, or water quality.
E. All permanent storm water quality measures have been implemented and are operational.

Upon written notification to the department the project site owner certifies that he/she will:

A. Notify all current individual lot owners and all subsequent lot owners of the remaining undeveloped acreage and acreage with construction activity that they are responsible for complying with section 7.5 of 327 IAC 15-5. The notice must inform the individual lot owners of the requirements to:
(1) install and maintain appropriate measures to prevent sediment from leaving the individual building lot; and
(2) maintain all erosion and sediment control measures that are to remain on-site as part of the construction plan.

PROJECT SITE OWNER RESPONSIBILITY STATEMENT

By signing this "Notice of Termination" letter, I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Printed name of project site owner _____

Signature of project site owner _____ **Date** _____

This "Notice of Termination" must be signed by an individual meeting the signatory requirements in 327 IAC 15-4-3(g).

SUBMITTAL OF THE "NOTICE OF TERMINATION"

Please submit the completed "Notice of Termination" to the Indiana Department of Environmental Management (IDEM). A copy of the "Notice of Termination" is required to also be submitted to the Soil and Water Conservation District (SWCD) or a Municipal Separate Storm Sewer System (MS4). The appropriate entity will typically be the agency that reviewed the construction/storm water pollution prevention plan associated with the project. The "Notice of Termination" shall be mailed to the IDEM at

Indiana Department of Environmental Management
Storm Water Permits Coordinator
100 North Senate Avenue
Mail Code 65-42,Room 1255
Indianapolis, IN 46204-2251

Additional considerations

It is not required by 327 IAC 15-5 that the termination is verified prior to submittal, however the SWCD or MS4, as the plan review agency, may elect to field verify project completion prior to the "Notice of Termination" submittal. Several MS4s require (by local ordinance) approval of all terminations prior to submitting the "Notice of Termination" to IDEM. Failure to submit this document to an MS4 that has adopted this provision may be a violation of the local MS4 ordinance.

If the agency participates, submit the completed Notice of Termination form to the SWCD or MS4. The request for termination will be reviewed for concurrence and either returned to the project site owner for submittal to IDEM or forwarded to IDEM on behalf of the project site owner.

FOR AGENCY USE ONLY (FIELD VERIFICATION OF TERMINATION)

The SWCD, an MS4 entity, or the Indiana Department of Environmental Management may inspect the project site to evaluate the adequacy of the remaining storm water quality measures and compliance with the Notice of Termination (NOT) requirements. If the inspecting entity finds that the project site owner has meet the requirements of 327 IAC 15-5-8, the entity may elect to sign off on the project. It is the responsibility of the project site owner to file the NOT with the Indiana Department of Environmental Management.

☐ **Accepted** The site referenced above has been inspected and it has been determined that the request to terminate this project is compliant with the requirements of 327 IAC 15-5. This form must be submitted to the IDEM for final processing.

☐ **Denied** The site referenced above has been inspected and it has been determined that the request to terminate this project is not compliant with the requirements of 327 IAC 15-5. Continue to implement the Storm Water Pollution Prevention Plan and take appropriate measures to minimize the discharge of pollutants.

Signature	**Printed name**	**Agency**	**Date** (*month, day , year*)

ON-SITE EVALUATION FOR EROSION AND SEDIMENT CONTROL

Date: 9-11-2013 County: Lawrence

Project Name: Northern Tributary Interim (IM) Work Plan

Present at Site: Whitney Baldwin(SWCD) ,Dan Perez (IDEM Storm Water Specialist)

TYPE OF EVALUATION: ☐ **Initial** ☒ **Routine** ☐ **Follow-up** ☐ **Complaint**

This evaluation is intended to assess the level of compliance with 327 IAC 15-5 (Rule 5). It is also intended to identify areas where additional measures may be required to control erosion and sedimentation. All practices recommended in this report should be evaluated as to their feasibility by a qualified individual, with structural practices designed by a qualified engineer.
All erosion and sediment control measures shall meet the design criteria, standards, and specifications outlined in the "Indiana Handbook for Erosion Control in Developing Areas" or similar guidance documents.

Current Site Information: Final Site vist- area is stable. NOT needs signed and returned

The Following Items Have Been Evaluated and Assigned a Designation of:

S = Satisfactory M = Marginal U = Unsatisfactory NA = Not Applicable

Construction Site Management for Erosion and Sediment Control

S	M	U	NA	
☒	☐	☐	☐	**(1)** Disturbed areas have been adequately protected through seeding or other appropriate erosion and sediment control measures.
☐	☐	☐	☒	**(2)** Appropriate perimeter sediment control measures have been implemented.
☒	☐	☐	☐	**(3)** Conveyance channels have been stabilized or protected with appropriate sediment control measures.
☒	☐	☐	☐	**(4)** Erosion & sediment control measures are installed properly.
☐	☐	☐	☒	**(5)** Storm drain inlets have been adequately protected.
☐	☐	☐	☒	**(6)** Outlets have been adequately stabilized.
☐	☐	☐	☒	**(7)** Existing erosion & sediment control measures are being maintained.
☒	☐	☐	☐	**(8)** Public & private roadways are being kept clear of accumulated sediment or tracked soil.
☐	☐	☐	☒	**(9)** Erosion & sediment control measures have been installed and maintained on individual building sites.

Status of Sediment Retention On-Site

☐ Site conditions present a high potential for off-site sedimentation.

Company name General Motors	
Project site owner's name (*an individual*) Cheryl Haiatt	
Address (*number and street*) 2000 Centerpoint Parkway Mail Code-483-753-190 , 1st floor Cobalt Station	

City Pontiac	**State** MI	**ZIP code** 48341
Telephone 248-753-5799 **FAX**	**E-mail address** (*if available*) cheryl.r.hiatt@gm.com	

THIS "NOTICE OF TERMINATION" IS BEING SUBMITTED FOR THE FOLLOWING

To be eligible for termination, specific criteria must be met. There are three options for which a project may be considered for termination. These options include:

- Option # 1 Certification for change of ownership;
- Option # 2 Certification for termination of construction activities *(327 IAC 15-8)*; and,
- Option # 3 Notice of termination to obtain early release from compliance with 327 IAC 15-5 (327 IAC 15-8).

Select one of the three options that apply to "Permit Termination" by checking the appropriate box, complete all information associated with that option, include required attachments (where applicable), and complete the "Project Site Owner Responsibility Statement" on page 2 of this form.

☐ **Option # 1 Certification for change of ownership**

This option does not apply to the sale of individual lots within the permitted acreage; only the sale of the entire project site as originally permitted. The agency may accept termination for entire sections or phases of a project that are sold. To determine if a project is eligible, please contact the IDEM Storm Water Permits Coordinator.

By signing this "Notice of Termination", I certify the following:

A. **The project was sold**; I am no longer the project site owner as was designated in my "Notice of Intent". The new owner of the project site is:

Company name (*If applicable*)

Project site owner's name (*An individual*)

Address (*number and street*)

City **State** **ZIP code**

Telephone number **FAX** **E-mail Address** (*If available*)

B. I have notified the new project site owner of his/her responsibilities to comply with 327 IAC 15-5 and the requirements associated with the rule including filing a new "Notice of Intent."

☒ **Option # 2 Certification for termination of construction activities**

By signing this "Notice of Termination", I certify the following:

A. All land disturbing activities, including construction on all building lots, have been completed and the entire site has been stabilized;
B. All temporary erosion and sediment control measures have been removed; and
C. No future land disturbing activities will occur at the project site.

(Continued on reverse side)

☐ **Option # 3 "Notice of Termination" to obtain early release from compliance with 327 IAC 15-5**

By signing this "Notice of Termination," I certify the following:

A. The remaining, undeveloped acreage does not exceed five (5) acres, with contiguous areas not to exceed one (1) acre.
B. A map of the project site, clearly identifying all remaining undeveloped lots, is attached to this letter. The map must be accompanied by a list of names and addresses of individual lot owners or individual lot operators of all undeveloped lots.
C. All public and common improvements, including infrastructure, have been completed and permanently stabilized and have been transferred to the appropriate local entity.
D. The remaining acreage does not pose a significant threat to the integrity of the infrastructure, adjacent properties, or water quality.
E. All permanent storm water quality measures have been implemented and are operational.

Upon written notification to the department the project site owner certifies that he/she will:

A. Notify all current individual lot owners and all subsequent lot owners of the remaining undeveloped acreage and acreage with construction activity that they are responsible for complying with section 7.5 of 327 IAC 15-5. The notice must inform the individual lot owners of the requirements to:
   (1) install and maintain appropriate measures to prevent sediment from leaving the individual building lot; and
   (2) maintain all erosion and sediment control measures that are to remain on-site as part of the construction plan.

PROJECT SITE OWNER RESPONSIBILITY STATEMENT

By signing this "Notice of Termination" letter, I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Printed name of project site owner _____

Signature of project site owner _____ **Date** _____

This "Notice of Termination" must be signed by an individual meeting the signatory requirements in 327 IAC 15-4-3(g).

SUBMITTAL OF THE "NOTICE OF TERMINATION"

Please submit the completed "Notice of Termination" to the Indiana Department of Environmental Management (IDEM). A copy of the "Notice of Termination" is required to also be submitted to the Soil and Water Conservation District (SWCD) or a Municipal Separate Storm Sewer System (MS4). The appropriate entity will typically be the agency that reviewed the construction/storm water pollution prevention plan associated with the project. The "Notice of Termination" shall be mailed to the IDEM at

Indiana Department of Environmental Management
Storm Water Permits Coordinator
100 North Senate Avenue
Mail Code 65-42,Room 1255
Indianapolis, IN 46204-2251

Additional considerations

It is not required by 327 IAC 15-5 that the termination is verified prior to submittal, however the SWCD or MS4, as the plan review agency, may elect to field verify project completion prior to the "Notice of Termination" submittal. Several MS4s require (by local ordinance) approval of all terminations prior to submitting the "Notice of Termination" to IDEM. Failure to submit this document to an MS4 that has adopted this provision may be a violation of the local MS4 ordinance.

If the agency participates, submit the completed Notice of Termination form to the SWCD or MS4. The request for termination will be reviewed for concurrence and either returned to the project site owner for submittal to IDEM or forwarded to IDEM on behalf of the project site owner.

FOR AGENCY USE ONLY (FIELD VERIFICATION OF TERMINATION)

The SWCD, an MS4 entity, or the Indiana Department of Environmental Management may inspect the project site to evaluate the adequacy of the remaining storm water quality measures and compliance with the Notice of Termination (NOT) requirements. If the inspecting entity finds that the project site owner has meet the requirements of 327 IAC 15-5-8, the entity may elect to sign off on the project. It is the responsibility of the project site owner to file the NOT with the Indiana Department of Environmental Management.

☐ **Accepted** The site referenced above has been inspected and it has been determined that the request to terminate this project is compliant with the requirements of 327 IAC 15-5. This form must be submitted to the IDEM for final processing.

☐ **Denied** The site referenced above has been inspected and it has been determined that the request to terminate this project is not compliant with the requirements of 327 IAC 15-5. Continue to implement the Storm Water Pollution Prevention Plan and take appropriate measures to minimize the discharge of pollutants.

Signature	Printed name	Agency	Date (*month, day , year*)

ON-SITE EVALUATION FOR EROSION AND SEDIMENT CONTROL

Date: 9-11-2013 County: Lawrence

Project Name: UpStream Interim Measure

Present at Site: Whitney Baldwin(SWCD) ,Dan Perez (IDEM Storm Water Specialist)

TYPE OF EVALUATION: ☐ **Initial** ☒ **Routine** ☐ **Follow-up** ☐ **Complaint**

This evaluation is intended to assess the level of compliance with 327 IAC 15-5 (Rule 5). It is also intended to identify areas where additional measures may be required to control erosion and sedimentation. All practices recommended in this report should be evaluated as to their feasibility by a qualified individual, with structural practices designed by a qualified engineer. All erosion and sediment control measures shall meet the design criteria, standards, and specifications outlined in the "Indiana Handbook for Erosion Control in Developing Areas" or similar guidance documents.

Sediment tracked into the street shall be removed (do not flush with water) at the end of each workday. _____
- ☐ Other Requirements:

  Post the N.O.I., (Notice of Intent), including project name, owner contact information, and other information as required by 327 IAC 15-5-7 (b) (6) at the entrance to the construction site.

RULE 5 – NOTICE OF TERMINATION (NOT)

State Form 51514 (R2 / 4-10)
INDIANA DEPARTMENT OF ENVIRONMENTAL MANAGEMENT
OFFICE OF WATER QUALITY

For questions regarding the requirements for project termination or completion of this form, contact:

Indiana Department of Environmental Management
Storm Water, Permits Coordinator
100 North Senate Avenue
MC 65-42, Room 1255
Indianapolis, Indiana 46204-2251
Telephone (317) 233-1864 or
(800) 451-6027(*within Indiana*), ext. 31864
Web Access: http://www.IN.gov/idem/4902.htm

Note: Submission of this Notice of Termination letter is a certification by the project site owner that the project meets the terms and conditions of the General Permit Rule 327 IAC 15-5 (Rule 5, Storm Water Discharges Associated with Construction Activity) for termination of permit coverage under the National Pollutant Discharge Elimination System (NPDES).

PROJECT NAME AND LOCATION

Permit number INR104528
(Note: Permit numbers were assigned to projects beginning in November of 2003. Therefore, a permit number is only applicable for those projects that began or were renewed on or after November of 2003).

Project name UpStream Interim Measure *(Note: Provide the project name as it appears on the active "Notice of Intent")*	**County** Lawrence

Company name General Motors

Project site owner's name (*an individual*) Cheryl Haiatt

Address (*number and street*) 2000 Centerpoint Parkway Mail Code-483-753-190 , 1st floor Cobalt Station

City Pontiac		**State** MI	**ZIP code** 48341
Telephone 248-753-5799	**FAX**	**E-mail address** (*if available*) cheryl.r.hiatt@gm.com	

THIS "NOTICE OF TERMINATION" IS BEING SUBMITTED FOR THE FOLLOWING

To be eligible for termination, specific criteria must be met. There are three options for which a project may be considered for termination. These options include:

- Option # 1 Certification for change of ownership;
- Option # 2 Certification for termination of construction activities *(327 IAC 15-8)*; and,
- Option # 3 Notice of termination to obtain early release from compliance with 327 IAC 15-5 (327 IAC 15-8).

Select one of the three options that apply to "Permit Termination" by checking the appropriate box, complete all information associated with that option, include required attachments (where applicable), and complete the "Project Site Owner Responsibility Statement" on page 2 of this form.

☐ **Option # 1 Certification for change of ownership**

This option does not apply to the sale of individual lots within the permitted acreage; only the sale of the entire project site as originally permitted. The agency may accept termination for entire sections or phases of a project that are sold. To determine if a project is eligible, please contact the IDEM Storm Water Permits Coordinator.

By signing this "Notice of Termination" , I certify the following:

A. **The project was sold**; I am no longer the project site owner as was designated in my "Notice of Intent". The new owner of the project site is:

Company name (*If applicable*)

Project site owner's name (*An individual*)

Address (*number and street*)

City **State** **ZIP code**

Telephone number **FAX** **E-mail Address** (*If available*)

B. I have notified the new project site owner of his/her responsibilities to comply with 327 IAC 15-5 and the requirements associated with the rule including filing a new "Notice of Intent."

☒ **Option # 2 Certification for termination of construction activities**

By signing this "Notice of Termination", I certify the following:

A. All land disturbing activities, including construction on all building lots, have been completed and the entire site has been stabilized;
B. All temporary erosion and sediment control measures have been removed; and
C. No future land disturbing activities will occur at the project site.

(Continued on reverse side)

☐ **Option # 3 "Notice of Termination" to obtain early release from compliance with 327 IAC 15-5**

By signing this "Notice of Termination," I certify the following:

A. The remaining, undeveloped acreage does not exceed five (5) acres, with contiguous areas not to exceed one (1) acre.
B. A map of the project site, clearly identifying all remaining undeveloped lots, is attached to this letter. The map must be accompanied by a list of names and addresses of individual lot owners or individual lot operators of all undeveloped lots.
C. All public and common improvements, including infrastructure, have been completed and permanently stabilized and have been transferred to the appropriate local entity.
D. The remaining acreage does not pose a significant threat to the integrity of the infrastructure, adjacent properties, or water quality.
E. All permanent storm water quality measures have been implemented and are operational.

Upon written notification to the department the project site owner certifies that he/she will:

A. Notify all current individual lot owners and all subsequent lot owners of the remaining undeveloped acreage and acreage with construction activity that they are responsible for complying with section 7.5 of 327 IAC 15-5. The notice must inform the individual lot owners of the requirements to:
   (1) install and maintain appropriate measures to prevent sediment from leaving the individual building lot; and
   (2) maintain all erosion and sediment control measures that are to remain on-site as part of the construction plan.

PROJECT SITE OWNER RESPONSIBILITY STATEMENT

By signing this "Notice of Termination" letter, I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Printed name of project site owner _____

Signature of project site owner _____ **Date** _____

This "Notice of Termination" must be signed by an individual meeting the signatory requirements in 327 IAC 15-4-3(g).

SUBMITTAL OF THE "NOTICE OF TERMINATION"

Please submit the completed "Notice of Termination" to the Indiana Department of Environmental Management (IDEM). A copy of the "Notice of Termination" is required to also be submitted to the Soil and Water Conservation District (SWCD) or a Municipal Separate Storm Sewer System (MS4). The appropriate entity will typically be the agency that reviewed the construction/storm water pollution prevention plan associated with the project. The "Notice of Termination" shall be mailed to the IDEM at

Indiana Department of Environmental Management
Storm Water Permits Coordinator
100 North Senate Avenue
Mail Code 65-42,Room 1255
Indianapolis, IN 46204-2251

Additional considerations

It is not required by 327 IAC 15-5 that the termination is verified prior to submittal, however the SWCD or MS4, as the plan review agency, may elect to field verify project completion prior to the "Notice of Termination" submittal. Several MS4s require (by local ordinance) approval of all terminations prior to submitting the "Notice of Termination" to IDEM. Failure to submit this document to an MS4 that has adopted this provision may be a violation of the local MS4 ordinance.

If the agency participates, submit the completed Notice of Termination form to the SWCD or MS4. The request for termination will be reviewed for concurrence and either returned to the project site owner for submittal to IDEM or forwarded to IDEM on behalf of the project site owner.

FOR AGENCY USE ONLY (FIELD VERIFICATION OF TERMINATION)

The SWCD, an MS4 entity, or the Indiana Department of Environmental Management may inspect the project site to evaluate the adequacy of the remaining storm water quality measures and compliance with the Notice of Termination (NOT) requirements. If the inspecting entity finds that the project site owner has meet the requirements of 327 IAC 15-5-8, the entity may elect to sign off on the project. It is the responsibility of the project site owner to file the NOT with the Indiana Department of Environmental Management.

☐ **Accepted** The site referenced above has been inspected and it has been determined that the request to terminate this project is compliant with the requirements of 327 IAC 15-5. This form must be submitted to the IDEM for final processing.

☐ **Denied** The site referenced above has been inspected and it has been determined that the request to terminate this project is not compliant with the requirements of 327 IAC 15-5. Continue to implement the Storm Water Pollution Prevention Plan and take appropriate measures to minimize the discharge of pollutants.

Signature	**Printed name**	**Agency**	**Date** (*month, day , year*)

Back Up Calculations for Upper Confidence Limits

July 27, 2004

MEMORANDUM

To: Cheryl Hiatt
Ed Peterson

From: C. Y. Jeng
Steve Song

Re: Computation of Nonparametric Bootstrap 95% UCLs

We have prepared this memorandum in response to USEPA's recent request for an explanation of how ENVIRON calculates nonparametric bootstrap 95% upper confidence limits (UCLs) using the percentile and BCa (bias-corrected and accelerated) methods to assess attainment of the PCBs soil cleanup level. Nonparametric bootstrap methods are being used as specified in the Upstream Removal Action Work Plan for this purpose, instead of traditional parametric methods, because data sets from verification sampling are expected to be highly skewed (i.e., they have a small proportion of data points that are much higher than the rest of the data set). For such data sets, matching the shape of the data distribution with an appropriate parametric method, if one exists at all, is difficult to do reliably. Conversely, nonparametric bootstrap methods do not rely on assumptions about the shape of the data distribution, and are robust enough to give reliable results even for data sets where parametric methods are available.

This memorandum provides a basic description of the algorithms for the two nonparametric bootstrap methods (percentile and BCa) specified in the Upstream Removal Action Work Plan, and includes example calculations using data from Verification Area 2 which were previously provided to USEPA and IDEM. The computer subroutines we wrote to implement the two algorithms in Mathematica are shown in Attachment 1. Tables that summarize the data sets and corresponding percentile and BCa 95% UCLs for the verification areas where UCLs have been calculated so far are provided in Attachment 2.

Discussion of the theory underlying the bootstrap method in general and the two algorithms discussed in this memorandum can be found in *An Introduction to the Bootstrap* (Efron and Tibshirani 1998), and are not repeated here.

Algorithm for the Percentile Method

Step 1: Obtain *bootstrap samples* by randomly selecting data points from the original data set. Random selection is done using a random number generator and with replacement, so that a data point in the original data set can be selected more than once. A bootstrap sample is constructed to have the same number of data points as the original data set.

The following are several bootstrap samples that were obtained from the test data set {0.288, 0.404, 1, 0, 0.727, 0.83, 0.111, 0.099, 1.96, 0.032}:

{0.099, 0.111, 1, 0.83, 0.099, 0.032, 0.288, 0.288, 0, 0},
{0.288, 0.83, 0.111, 0.032, 0.83, 0.032, 1.96, 0.727, 0.099, 0},
{0.288, 0.404, 0.288, 0, 0.111, 0.032, 0.83, 1.96, 1, 0.404},
{0, 1.96, 0.032, 0, 1.96, 1.96, 1, 0.404, 0.404, 0.032},
{0, 0.288, 0.111, 0.032, 0.404, 1, 0.288, 0.099, 1.96, 0.83}

In this example, the original data set has 10 data points, so each bootstrap sample also consists of 10 data points.

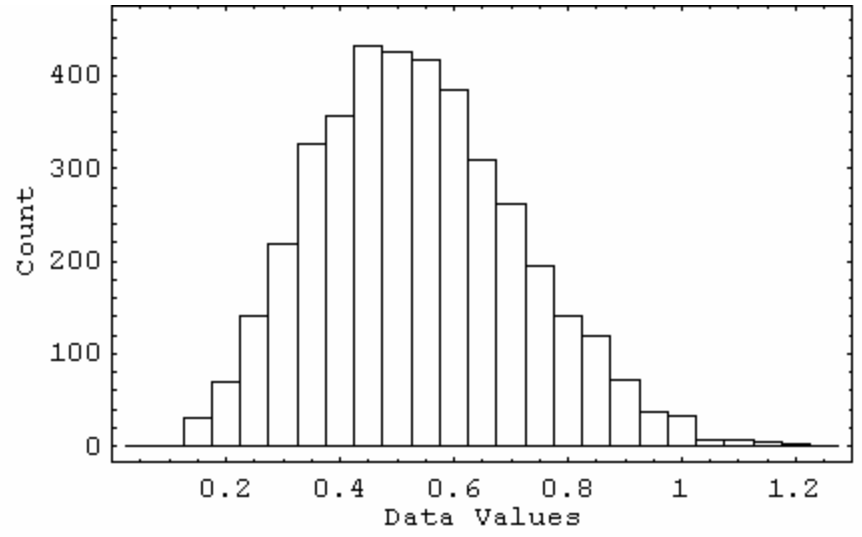
However, note that by sampling with replacement, some data points in the original data set may appear more than once in a bootstrap sample. For example, the first data point of 0.288 in the original data set appears twice in the first bootstrap sample above. Conversely, some data points in the original data set may not appear at all in a bootstrap sample. For example, the second data point of 0.404 in the original data set does not appear in the first bootstrap sample.

Step 2: Obtain *bootstrap replications* by calculating the arithmetic mean for each bootstrap sample. The following are the bootstrap replications that correspond to the bootstrap samples shown in Step 1:

0.2747
0.4909
0.5317
0.7752
0.5012

For comparison, the mean of the original data set is 0.5451.

Step 3: After obtaining 4,000 bootstrap replications of the mean from Steps 1 and 2, sort the replications from low to high. The following is a histogram of the 4,000 bootstrap replications of the test data set (including the above bootstrap replications).



Step 4: In the percentile method, the 95% UCL is obtained by using the 95th percentile bootstrap replication. For the above set of 4,000 bootstrap replications, the 95th percentile value of 0.8567 (or the 3,800th highest value) is used as the percentile 95% UCL.

Algorithm for the BCa Method

Steps 1 to 3: These steps are the same as those in the percentile method.

Step 4: In the BCa method, the 95% UCL is obtained from the same distribution of the 4,000 bootstrap replications, but instead of using the 95th percentile, it uses the α' percentile which is calculated as follows:

$$\alpha' = \Phi\left[z_0 + \frac{z_0 - z}{1 - \hat{a}(z_0 - z)} \right]$$

The function $\Phi[\bullet]$ represents the cumulative distribution function of the standard normal distribution, and z is the 5th percentile point of the standard normal distribution (-1.64485). The values of the bias-correction z_0 and the acceleration â are calculated using Equations 14.14 and 14.15, respectively, from Efron and Tibshirani (1998).

For the 4,000 bootstrap replications shown in the above histogram, the values of z_0, â, and α' are as follows:

z_0 = 0.119979
â = 0.0668862
α' = 0.98304

For this set of 4,000 bootstrap replications, the 98.3th percentile value of 0.9587 (or the 3,933th highest value) is used as the BCa 95% UCL.

JackknifeReplications[x_, s_] := Map[s, JackknifeSamples[x]]
```

ATTACHMENT 2

Summary of 95% Upper Confidence Limit Calculations Performed to Date

ATTACHMENT 2

Summary of 95% Upper Confidence Limit Calculations Performed to Date

The following tables summarize the data sets and corresponding percentile and BCa 95% UCLs for the verification areas that have needed UCL calculations so far. As specified in the Upstream Removal Action Work Plan, side-wall soil samples were initially collected every 50 linear feet to form a 5-point composite sample. The protocol for collecting these samples in the areas downstream of the Site Source Control barrier outside of Outfall 002 was subsequently modified in the Upstream Removal Action Work Plan Addendum No. 4 to collect samples every 25 linear feet to form a 5-point composite sample.

The UCL calculations in the following tables include results that are based on side-wall samples collected at 25-ft intervals (Verification Area 4) and at 50-ft intervals (Verification Areas 2 and 6). Calculation of UCLs was not necessary for the other data sets (including those for Verification Areas 2 and 6 that were based on 25-ft interval side-wall sampling) because no verification samples exceed 1.8 mg/kg in those data sets, as discussed in the Upstream Removal Action Work Plan.

Calculation Outputs

Percentile Bootstrap 95% UCL	4.21E-01	mg/kg
BCa Bootstrap 95% UCL	5.09E-01	mg/kg

Notes:

Concentrations of non-detect (U-qualified) data used in the 95% UCL calculations are one-half the Limit.

Type Code: N = normal environmental sample, AVG = averaged duplicate

Sidewall samples were collected every 25 linear feet to form a 5-point composite.

The concentration for S-006-031804-CH-5120 is the average of duplicate pair samples S-006-031804-CH-5120 and S-006-031804-CH-5121.

The concentration for S-004-061704-CH-5465 is the average of duplicate pair samples S-004-061704-CH-5465 and S-004-061704-CH-5467.

The concentration for S-004-031604-CH-5116 is the average of duplicate pair samples S-004-031604-CH-5116 and S-004-031604-CH-5117.

The concentration for S-005-061604-CH-5443 is the average of duplicate pair samples S-005-061604-CH-5443 and S-005-061604-CH-5445.

The concentration for S-005-061704-CH-5451 is the average of duplicate pair samples S-005-061704-CH-5451 and S-005-061704-CH-5453.

Calculation Outputs

Percentile Bootstrap 95% UCL	5.97E-01	mg/kg
BCa Bootstrap 95% UCL	6.28E-01	mg/kg

Notes:

Concentrations of non-detect (U-qualified) data used in the 95% UCL calculations are one-half the Quantitation Limit.
Type Code: N = normal environmental sample, AVG = averaged duplicate
Sidewall samples were collected every 25 linear feet to form a 5-point composite.
The concentration for S-020-010906-AH-6980 is the average of duplicate pair samples S-020-010906-AH-6980 and S-020-010906-AH-6981.
The concentration for S-020-012306-AH-12033 is the average of duplicate pair samples S-020-012306-AH-12033 and S-020-012306-AH-12034.
Total PCB concentrations used in the calculations are the sum of detected Aroclors. Where no Aroclors were detected, half of the quantitation limit is used.

Calculation Outputs					
Percentile Bootstrap 95% UCL		7.90E-01	mg/kg		
BCa Bootstrap 95% UCL		8.13E-01	mg/kg		
Notes:					

Concentrations of non-detect (U-qualified) data used in the 95% UCL calculations are one-half the Quantitation Limit.

Type Code: N = normal environmental sample, AVG = averaged duplicate

Sidewall samples were collected every 25 linear feet to form a 5-point composite.

The concentration for S-036-071006-MD-14990 is the average of duplicate pair samples S-036-071006-MD-14990 and S-036-071006-MD-14991.

The concentration for S-036-090606-CH-16340 is the average of duplicate pair samples S-036-090606-CH-16340 and S-036-090606-CH-16341.

The concentration for S-036-092006-MD-18290 is the average of duplicate pair samples S-036-092006-MD-18290 and S-036-092006-MD-18291.

The concentration for S-036-081106-CH-18080 is the average of duplicate pair samples S-036-081106-CH-18080 and S-036-081106-CH-18081.

Notes:

Concentrations of non-detect (U-qualified) data used in the 95% UCL calculations are one-half the Quantitation Limit.

Type Code: N = normal environmental sample, AVG = averaged duplicate

Sidewall samples were collected every 25 linear feet to form a 5-point composite.

The concentration for S-040-082907-AH-24950 is the average of duplicate pair samples S-040-082907-AH-24950 and S-040-082907-AH-24951.

The concentration for S-040-081607-AH-24760 is the average of duplicate pair samples S-040-081607-AH-24760 and S-040-081607-AH-24761.

Max = The sample concentration used in the UCL calculation was the maximum PCBs (total) concentration of the two samples collected within the grid cell floor.

The concentration for sample S-040-081707-AH-24779 is the maximum concentration between S-040-081707-AH-24779 and S-040-021508-AH-30253.

Calculation Outputs					
Percentile Bootstrap 95% UCL		6.66E-01	mg/kg		
BCa Bootstrap 95% UCL		6.90E-01	mg/kg		
Notes:					

Concentrations of non-detect (U-qualified) data used in the 95% UCL calculations are one-half the Quantitation Limit.

Type Code: N = normal environmental sample, AVG = averaged duplicate

Sidewall samples were collected every 25 linear feet to form a 5-point composite.

The concentration for S-040-110107-AH-28600 is the average of duplicate pair samples S-040-110107-AH-28600 and S-040-110107-AH-28601.

The concentration for S-040-111907-AH-28770 is the average of duplicate pair samples S-040-111907-AH-28770 and S-040-111907-AH-28771.

The concentration for S-040-110507-AH-28610 is the average of duplicate pair samples S-040-110507-AH-28610 and S-040-110507-AH-28611.

Letter of Completion of Former Staging Area G Work for Racer

Real Estate and Facilities
Remediation Team

August 24, 2011 Reference No. 013968

Mr. Robert W. Hare, P.E., CHMM
Cleanup Manager (IL, IN, KS, MO, NJ, WI)
RACER Trust
2930 Ecorse Road
Ypsilanti, MI
48198

Dear Mr. Hare:

Re: Completion of Work Described in June 23, 2010 Letter Agreement for Soil Removal Activities for Parcel 39A
GM CETC - Bedford Facility
Bedford, Indiana

In accordance with Section 1(e) of the Letter Agreement (Agreement) dated June 23, 2010, between General Motors LLC (GM) and Motors Liquidation Company (MLC) (see Attachment), this letter is to formally notify you of the completion of GM's obligations for the Work as set forth within the aforementioned Agreement. It is our understanding that RACER Trust has legally assumed this Agreement from MLC.

Consistent with Section 1(e) of the Agreement the soil removal work has been completed in accordance with an approved work plan under the CERCLA Administrative Order on Consent (Docket Number V-W-`03-C-747) and the RCRA Performance Based Agreement with U.S. EPA. Specifically, the attached work plan, previously reviewed and approved by MLC, describing the planned soil removal activities for Parcel 39A was approved by the U.S. EPA as Downstream Parcels Removal Action (RA) Work Plan: Addendum No. 3 (Revision 1; CRA, March 25, 2011). The prescriptive removal area was established by the delineation sample results presented in Addendum No. 3. Delineation sample results and the Downstream Parcels Removal Action (RA) Work Plan: Addendum No. 3 were supplied to Motors Liquidation Company (MLC) at the time of the Addendum No. 3 preparation. A copy of the delineation sampling results is attached in Table 1.

As outlined in the approved Addendum No. 3, confirmation of the cleanup was completed based on the post excavation surveys for both the clean clay removal and the contaminated soil removal. Elevations for clean clay excavation and impacted soil removal were based on the surveyed delineation borehole logs. A post excavation survey was completed to confirm removal of contaminated soil within the required grids and creek sections. Figure 1 presents the excavated grids and depths. Table 1 presents the delineation samples results and indicates the status of samples that were removed through the removal work.

30009 Van Dyke Ave. • P.O. Box 9026 • Mail Code 480-206-1E0 • Warren, MI 48090-9026 • FAX (586) 575-5203

Please contact me if you have any questions regarding this Notification of Completion of the Work.

Yours truly,

General Motors LLC

Cheryl R. Hiatt
PG//1

ATTACHMENT 1

LETTER AGREEMENT

June 23, 2010

Mr. James Redwine
Vice-President, Environmental
Motors Liquidation Company
500 Renaissance Center., Suite 1400
Detroit, Michigan 48243

Dear Mr. Redwine:

This Letter Agreement ("Agreement") sets forth the terms and conditions under which General Motors LLC will conduct soil removal activities on a certain parcel of real property owned by Motors Liquidation Company ("MLC") in Bedford, IN for MLC.

In accordance with the Amended and Restated Master Sale and Purchase Agreement dated June 26, 2009 by and among General Motors Corporation, Saturn LLC, Saturn Distribution Corporation, Chevrolet-Saturn of Harlem, Inc., and NGMCO, Inc. (the "MSPA"), General Motors Corporation (now MLC) sold, transferred, and assigned to NGMCO, Inc, (now General Motors LLC ("GM")) certain real properties, defined under the MSPA as the "Transferred Real Property," and GM assumed certain liabilities with respect to such real properties. One of these real properties is the Bedford Powertrain facility ("Bedford Facility") located at 105 GM Drive in Bedford, IN. Certain non-manufacturing real properties located in Bedford, IN, not associated with the Bedford Facility, were retained by MLC under the MSPA as "Excluded Real Property" as defined under the MSPA.

As you know, an issue regarding ownership of certain of these non-manufacturing parcels, including the parcel that is the subject of this Agreement, referred to by the Parties as "Parcel 39A", had been raised by MLC. That issue has been resolved, in concept, by MLC and GM which have agreed, in concept, pending approval of the Bankruptcy Court, that these parcels should be deemed "Excluded Real Property" under the MSPA and ownership of these parcels, including Parcel 39A, should remain with MLC. The remainder of this Letter Agreement is written under the premise that the Bankruptcy Court will approve the Parties' resolution of this issue and that MLC will continue to retain ownership of Parcel 39A.

In the event the Bankruptcy Court does not so approve the Parties' resolution of this issue and determines that Parcel 39A should have been transferred by MLC to GM under the

MSPA, then this document shall be null and void as to the soil removal work to be completed on Parcel 39A as set forth in Section 1 below and any payments made to GM by MLC hereunder related to the soil excavation activities and maintenance activities on Parcel 39A shall be promptly reimbursed to MLC by GM as soon as reasonably practicable after the date of the transfer of the deed for Parcel 39A by MLC to GM, but no later than sixty (60) days after receipt by GM of written notice from MLC evidencing the date of such deed transfer, and thereupon MLC will have no further responsibility or liability for Parcel 39A. In the event of such transfer of ownership of Parcel 39A, GM will continue any Work (as defined herein) related to Parcel 39A required under the Order (as defined herein) at its sole cost. This Agreement, however, shall remain in full force and effect regarding: the granting of access to GM on MLC-owned properties under Section 3, and the deed restriction requirements under Section 4.

In accordance with the MSPA, GM is currently conducting remediation at the Bedford Facility and at certain properties located in the vicinity of the Bedford Facility that are owned by third parties, not including MLC-owned properties. Certain of the properties owned by MLC in Bedford also require remediation in the form of removal of contaminated soils in the area of Pleasant Run Creek pursuant to the terms of a CERCLA Administrative Order on Consent (Docket Number V-W-03-C-747) dated July 31, 2003 (the "Order') and a RCRA Performance-Based Agreement with U.S. EPA effective March 20, 2001, as amended October 1, 2002, March 29, 2007, and May 9, 2008 (the "RCRA Agreement) which are not obligations assumed by GM under the MSPA.

GM and MLC have conducted a careful analysis of the work and costs involved with regard to removal of contaminated soil at Parcel 39A and agree that the cost for MLC to bear the responsibility of conducting such contaminated soil removal on this MLC-owned property would exceed the cost that GM would incur in conducting this work due to the fact that: (1) GM currently has contractors mobilized in the area in connection with GM's ongoing remediation work at the Bedford Facility and third-party properties, and (2) GM can make use of the contaminated soils to be removed from the MLC-owned property in its capping efforts on the Bedford Facility property (although GM's capping efforts can be completed without use of such soils), which is a savings to MLC of the cost to transport and dispose of the soils at a commercial landfill.

Therefore, in recognition that completing the soil removal work at Parcel 39A is in the interest of both parties, MLC and GM have reached an agreement whereby GM, in exchange for valuable consideration, will conduct certain soil removal work for MLC on a certain MLC-owned property in accordance with the following terms and conditions:

1. (a) GM will conduct: (i) removal of the contaminated soil pile and underlying soil located on Parcel 39A (herein collectively, the "Soil Pile") and identified on Attachment 1 hereto in accordance with the established project protocols as set forth in the Order and the workplan prepared under the Order, and during this active work period, stormwater management, maintenance of the Soil Pile and temporary diversion channel, oversight of the contractor(s),

and including daily inspections and security checks, water management, utility services, repairs as necessary of the temporary diversion channel, use of construction fencing and tarps, and spreading gravel along road shoulders and parking areas as needed (collectively, "Maintenance Activities"); and (ii) during the seasonally inactive periods prior to such Soil Pile removal completion (including the 2011 winter/rainy season when construction activities required for the work set forth in Section 1(a)(i) is not cost-effective) from the date of this Agreement until the completion of the work described above in this Section 1(a)(i), Maintenance Activities. Typical maintenance activities during seasonal shutdown include, but are not limited to, daily inspections and security checks; storm/impacted water management; utility services; repair of Diversion Channel 3, construction fencing, tarps, gravel along road shoulders and parking areas. Collectively, the activities set forth in this Section 1 (a)(i) and (ii) are referred to herein as the "Work." In no event, however, will GM be responsible or liable hereunder for conducting or paying for any additional activities, including, without limitation, any actions required as a result of a catastrophic event, such as a flood or tornado, which washes away or significantly alters the covered Soil Pile or creek channel during the maintenance period specified above in Section 1(a)(ii). Payment for the Work by MLC is set forth in Sections 1(b) and (c) below. GM recognizes that MLC desires that the Work be performed as soon as practicable MLC recognizes that, in addition to the Work, GM is performing other significant remedial work associated with the Bedford Facility under the Order and the RCRA Agreement. Therefore, GM will promptly initiate the contractor procurement and mobilization process for the Work upon execution of this Agreement, and will actively commence, implement, and complete the Work with all reasonable diligence, in consideration of customary work practices, project schedules established for the remedial work being conducted by GM at the Bedford Facility under the Order and RCRA Agreement, weather conditions, safety concerns, and unanticipated events.

(b) In consideration for that portion of the Work set forth in Section 1(a)(i) of this Agreement, MLC shall pay GM $3,169,089 prior to initiation of the Work, but no later than July 10, 2010. GM will notify MLC in writing upon commencement of such portion of the Work, currently anticipated to commence in July, 2010. MLC and GM acknowledge that this Agreement is subject to Bankruptcy Court approval. If the Bankruptcy Court enters an order denying approval of this Agreement, GM shall refund to MLC, no later than sixty (60) days after receipt by GM of written notice from MLC of the Bankruptcy Court's entry of such order, all sums paid by MLC pursuant to Paragraphs 1(b) and 1(c) of this Agreement.

(c) With respect to that portion of the Work set forth in Section 1(a)(ii), MLC shall reimburse GM for such actual costs reasonably incurred by GM. Such actual costs will be billed monthly to MLC, on a time and materials basis, as such costs are incurred by GM. MLC shall reimburse GM within thirty (30) days of receipt of such billing.

(d) GM will not be responsible or liable for conducting any activities at or on Parcel 39A under the Order or this Agreement not expressly governed by this Agreement, such as by way of example and not limitation, restoration or maintenance activities after the Work described herein has been completed by GM under the Order unless the Bankruptcy Court does not so approve the Parties' resolution of the property issue and determines that Parcel 39A

should have been transferred by MLC to GM under the MSPA. MLC agrees to take all steps reasonably necessary to obtain Bankruptcy Court approval of this Agreement.

(e) So long as MLC continues to own Parcel 39A, upon completion of the excavation and transportation of materials from the Soil Pile, GM shall provide MLC with a written notice of completion of the Work. Such written notice of completion of the Work will consist of the verification sampling results and applicable statistical analysis as provided under the Order demonstrating that the removal criteria have been met as established in the applicable work plan under the Order.

2. MLC has the right to observe all Work activities on MLC-owned properties; provided, that MLC personnel or representatives follow all health and safety protocols established for the Work that apply to such observation actions by MLC. MLC may raise concerns, if any, regarding the Work with GM, but in no instance will MLC have a right to direct GM's contractors performing the Work. MLC shall raise any such concerns in accordance with the notice provision set forth below in Paragraph7.

3. So long as MLC continues to own Parcel 39A, MLC hereby grants GM access to Parcel 39A to accomplish this Work and access to the following additional MLC-owned properties, for so long as MLC maintains ownership, in connection with GM's remediation work on third party-owned properties adjacent to MLC-owned properties: Parcels 5(east), 5(west), 7, 8, 10, 11, 12, 13, 20, 23A, 28A, 37, 38, 39A, 76A, 76B, and 78 as more specifically identified on Attachment 2 hereof. In the event MLC transfers ownership of Parcel 39A or any of the other MLC-owned properties listed herein to an entity other than GM, MLC shall reserve an easement in the deed so transferring ownership to such entity allowing GM continued access to perform the Work under this Agreement. In the event that GM reasonably requires access to other MLC-owned properties in connection with GM's remediation work on third party-owned properties adjacent to MLC-owned properties, MLC shall reasonably cooperate with GM in granting GM access to such properties.

4. MLC agrees to impose the deed restrictions set forth in Attachment 2 on all properties owned by MLC in Bedford, IN prior to the sale of any such property to a third party. GM shall, at its sole cost, prepare such deed restrictions for MLC signature and will record such restrictions with the proper authority.

5. GM will be responsible and liable for the transportation, management, and disposal of any contaminated soils removed from Parcel 39A in connection with its Work under this Agreement, including any use of or disposal by GM of such soils.

6. With the approval of the Bankruptcy Court, MLC shall assign its interest in this Agreement to an entity or trust (the "Trust") that may be created in the MLC bankruptcy case to address certain of MLC's environmental liabilities related to the remediation of MLC's owned real property In the event that MLC assigns its interest in this Agreement to the Trust, GM

shall waive, release and forever discharge any claims, demands, suits, counterclaims, actions and causes of action it has, or might have had or may have against MLC, its directors, officers, shareholders, members, managers, employees, agents, representatives, consultants, counsel, subsidiaries, affiliates or other entities controlling or controlled by or under common control with respect to, arising out of or in connection with, directly or indirectly, this Agreement, and the Trust shall be entitled to, but not limited to, all of the benefits and protections afforded to MLC under this Agreement.

7. All notices and other communications required under this Agreement shall be in writing and shall be deemed given (i) when delivered personally by hand (with written confirmation of receipt), (ii) when sent by facsimile (with written confirmation of transmission), (iii) when sent by email (with electronic confirmation of receipt) or (iv) one (1) Business Day following the day sent by overnight courier (with written confirmation of receipt), in each case at the following addresses and facsimile numbers (or to such other address or facsimile number as a party may have specified by notice given to the other party pursuant to this provision):

8. THE PARTIES AGREE THAT THE BANKRUPTCY COURT FOR THE SOUTHERN DISTRICT OF NEW YORK IN *IN RE GENERAL MOTORS CORP., ET AL.*, CHAPTER 11 CASE NO. 09-50026 (REG) (THE "BANKRUPTCY COURT") SHALL HAVE EXCLUSIVE JURISDICTION OVER ALL DISPUTES AND OTHER MATTERS RELATING TO THE INTERPRETATION AND ENFORCEMENT OF THIS AGREEMENT, AND THE PARTIES EXPRESSLY CONSENT TO AND AGREE NOT TO CONTEST SUCH EXCLUSIVE JURISDICTION.

9. This Agreement shall be governed by and construed in accordance with the laws of the State of New York and the orders of the Bankruptcy Court.

10. This Agreement may be executed in one or more counterparts, each of which will be deemed to be an original copy of this Agreement and all of which, when taken together, will be deemed to constitute one and the same agreement.

11. This Agreement shall be binding upon and enforceable by, and shall inure to the benefit of, the Parties and their respective initial successor or assign in the event MLC transfers ownership and/or possession of Parcel 39A or other MLC-owned properties to which MLC has granted GM access hereunder to a third-party and GM has not completed the Work hereunder as of the date of such transfer. Other than as specifically provided in this Section 10, nothing herein is intended to create or grant to any third party any rights or benefits to or from this Agreement.

Please indicate your agreement with the foregoing terms by signing in the space provided below and return it to the undersigned as soon as possible. The enclosed duplicate copy is for your records.

MEMORANDUM

TO:	Brad Stimple	REF. NO.:	13968
FROM:	Jim McGuigan/jdh/697/rev1	DATE:	March 25, 2011
C.C.:	Peter Ramanauskas, Jerry O'Callaghan, Dave Favero, Cheryl Hiatt, Ed Peterson, Katie Kamm, Paul Gallaway		
RE:	**Downstream Parcels Removal Action Work Plan: Addendum No. 3 – Revision 1 GM CETC Bedford Facility Bedford, Indiana**		

1.0 INTRODUCTION

In accordance with the Administrative Order on Consent (AOC), effective July 31, 2003, and pursuant to Section 3.7: Soil Excavation, Handling and Backfilling in the Downstream Parcels Removal Action Work Plan (CRA, May 2004), and the Parcel 22/Downstream Parcels Removal Action: Addendum No 1 (CRA, May 2005), we are providing the following supplemental information and proposing revised procedures regarding the removal action for the remaining PCB impacted soil excavation beneath the former Staging Area G footprint. The former Staging Area G refers to the remnant of the engineered stockpile utilized to temporarily consolidate and manage contaminated soil generated from the Removal Action west of Peerless Road. The engineered stockpile was constructed in an area of the Removal Action prior to the remediation of the underlying native soils. The last of the contaminated soils within the engineered stockpile were removed and transported to the GM CETC Bedford Facility in 2010. The remnants of former Staging Area G consists of approximately 2 feet of a clean clay pad and geotextile material overlaying these impacted native soils.

Figure 1.1 presents the original, preliminary limit of the remaining excavation based on the initial delineation phase (2002), which was conducted prior to submittal of the Downstream Parcels Removal Action Work Plan. The purpose of this amendment to the Removal Action Work Plan (Downstream Parcels Removal Action Work Plan: Addendum No. 3) is to propose revised excavation limits on a prescriptive removal basis based on substantial additional delineation sampling completed from October 2010 through March 2011.

2.0 ADDITIONAL GRID SAMPLING INVESTIGATION RESULTS SUMMARY

The area under and around the former Staging Area G was gridded off and a total of 115 boreholes were advanced within the gridded area in accordance with the approved Additional Proposed Delineation Sampling Plan, Second Revision (CRA, October 22, 2010). Samples were collected in 0.5 feet (ft) intervals within the native soil, to a maximum depth of 4.5 ft. Samples were analyzed with increasing depth in an iterative fashion until a result was obtained that was no greater than 1.8 milligrams per kilogram (mg/kg).

In all, 299 samples, including 29 duplicates were analyzed for Total PCBs. A total of 19 samples were also collected from the clay pad immediately above the native soil/clay pad contact. A summary of all sample results collected during this investigation can be found in Table 2.1. Figures 2.1 and 2.2 present data boxes of new and prior sample results for the area.

Two locations had sample results greater-than-or-equal to 50 mg/kg (≥50 mg/kg) PCBs. Borehole B-253E had a detection of 57.9 mg/kg PCBs at 0–0.5 ft below the clay staging pad and liner (e.g., 0-0.5 ft into the native material). Borehole B-263A had a detection of 52 mg/kg PCBs 0–0.5 ft below the clay staging pad and liner. Four additional borings were completed 7.5 ft out concentrically from each ≥50 mg/kg PCB sample location to further refine the distribution limits of the ≥50 mg/kg PCBs material. None of the samples from these additional step-out locations exhibited PCB concentrations ≥50 mg/kg. Therefore, the two ≥50 mg/kg PCB locations have been delineated to two separate small areas of less than 15 ft across for each location.

The sample results for the gridded areas indicate that native soil PCB concentrations in the southern and western portions generally have greater and deeper detections than samples collected in the northern and eastern grids; that is, with a few exceptions, sample concentrations generally decreased with distance away from the creek. The data also corresponded well to the previous delineation samples, where concentrations found beyond the original delineation limit were less than the cleanup criteria of 1.8 mg/kg PCBs, and those just inside the limit generally were <1.8 mg/kg PCBs or slightly >1.8 mg/kg PCBs.

3.0 PRESCRIPTIVE REMOVAL

Based on the results described in Section 2 and outlined on the attached Figures, GM is proposing to complete the remaining excavation and material handling on a prescriptive basis as described below.

For the remaining grids where removal has not yet been completed:

- Where soil results for a grid area are >1.8 mg/kg PCBs, excavation of PCB impacted materials will be performed after the existing clay pad overlying the native material is removed to within approximately 0.5 ft above the existing liner. This clean clay pad material will be segregated from the contaminated native soil requiring removal. For grids to be excavated, the remaining approximate 0.5 ft of clay material above the liner will be excavated and disposed with the impacted native material.
- Removal of ≥50 mg/kg PCB soil will be completed first at two locations indicated on Figure 3.1 to a width and length of approximately 15 ft by 15 ft (7.5 ft radially out to the next sample location below 50 mg/kg), and depth of 0.5 ft below the native ground surface based on the sample results. The ≥50 mg/kg PCB soil material will be directly loaded into trucks and transported to the previously approved Heritage Industrial Services landfill in Roachdale, IN.
- Where prior or new delineation sample results are >1.8 mg/kg PCBs but <50 mg/kg PCBs, excavation of the entire subject sampling grid of approximately 50 ft by 50 ft will be completed to the upper depth of a sample collected within the grid that is ≤1.8 mg/kg PCBs (i.e., the entire depth interval for samples >1.8 mg/kg PCBs would be removed within the entire 50 ft by 50 ft grid.).
- If a prior delineation sample results falls along a grid line, half of the adjoining grid will be removed such that a minimum area of approximately 50 ft by 50 ft around the sample point is removed.

- The initial delineation sample result of 1.97 mg/kg PCBs collected 0.33 – 2 ft BGS at the 2002 location 039-908 was not more specifically delineated to 0.5 foot intervals in the last 2010 sampling effort. In the vicinity of 039-908, the 2010 sampling results generally identified the highest results are within 0.5 ft below the native surface with a sharp concentration decrease observed beyond 0.5 ft into the native soil in the nearby grids. As the only other location to be removed to a 2 ft depth is a location with ≥50 mg/kg PCBs, it is believed the soil >1.8 mg/kg PCBs in the historical sample was likely constrained to the first several inches of the 1.66 ft sample length. Therefore, additional incremental sampling was conducted immediately adjacent to the location 039-908, prior to finalizing the depth of excavation in the approximate 50 ft by 50 ft area surrounding location 039-908 (hatched area on Figure 3.1). Borehole 039-908a was advanced on March 16, 2011 and four samples were collected at a location adjacent to 039-908 to depths below native surface of 0.5 – 1 ft, 1 – 1.5 ft, 1.5 – 2 ft, and 2 – 2.5 ft. All four samples were analyzed for PCBs on a rush turn-around-time. Preliminary results for all four sample depths were provided to U.S. EPA on March 18, 2011, and are also included in Table 2.1 (all <1.8 mg/kg PCBs). As a result it is proposed that the 50 ft by 50 ft area surrounding location 039-908 will be excavated to a depth of 0.5 ft below native surface..
- An additional sample was collected from location 039-076a at 4 - 4.5 ft below native ground surface to confirm the adjacent location 039-076 met the cleanup criteria due to previous sample results that were qualified as rejected for the non-detect Aroclors due to low surrogate recovery for one of the two surrogates used in PCB analysis. The result for this additional sample was non-detect for PCBs (<0.044 mg/kg), confirming that no removal is required at this location to meet the cleanup criteria.
- Please note that a portion of Grid 244C had been previously removed to meet the 1.8 mg/kg PCB criteria, only the remaining portion of the gridded area will be removed during this excavation effort.
- Portions of grids lying within 2 ft of the creek channel will be excavated to the upper depth of the sample within the grid that is ≤1 mg/kg PCBs (grids 244D and 244E).
- All soil >1.8 mg/kg PCBs but <50 mg/kg PCBs removed from the Staging Area G area will be transported by truck to the GM CETC Bedford Facility and consolidated within the East Plant Area as part of the on-going Interim Measure at the facility.
- Where prior delineation and new delineation sample results are ≤1.8 mg/kg PCBs, no excavation and no further sampling is proposed and the grid will be considered to meet the cleanup criteria.

Based on prior site experience, the fact that there are no houses in the immediate vicinity, and due to the relatively small area of ≥50 mg/kg PCBs soil to be removed, perimeter air monitoring will not be conducted, but the contractor will perform real-time air monitoring for the duration. Where practical, soil will be placed directly into on-road haul trucks to minimize material handling and no stockpile sampling is proposed.

CERTIFICATE OF TREATMENT AND DISPOSAL

HERITAGE ENVIRONMENTAL SERVICES, LLC CERTIFIES AND ASSURES TO OUR CUSTOMERS THAT THE TRANSACTION DESCRIBED BELOW, INCLUDING TREATMENT AND/OR STORAGE AND/OR RECLAMATION AND/OR DISPOSAL HAS BEEN HANDLED IN COMPLIANCE WITH ALL APPLICABLE LOCAL, STATE AND FEDERAL LAWS AND REGULATIONS.

Heritage Environmental Services, LLC certifies that the transaction described by the identifying information below has been conducted as described. Under civil and criminal penalties of law for the making or submission of false or fraudulent statements or representations (18 U.S.C. 1001 and 15 U.S.C. 2615), I certify that the information contained in or accompanying this document is true, accurate, and complete. As to the identified section(s) of this document for which I cannot personally verify truth and accuracy, I certify as the company official having supevisory responsibility for the persons who, acting under my direct instructions, made the verification that this information is true, accurate, and complete.

Notes:

* Results not reported due to machine malfunction.

** UPWIND machine did not run, therefore percent allowable not calculable.

J Estimated result. Results if less than reporting limit.

(1) Exceedance attributed to rock breaking near Swallets 2 and 3.

(2) No work conducted in the vicinity of air monitoring station.

(3) Exceedance attributed to rock breaking near Swallet 1.

(4) Exceedance attributed to project truck traffic along haul road.

(5) Exceedance attributed to excavation activities along Parcel 15 and Parcel 216.

(6) Exceedance attributed to rock breaking activities.

Notes:

* Results not reported due to machine malfunction.

** UPWIND machine did not run, therefore percent allowable not calculable.

J Estimated result. Results if less than reporting limit.

(1) No work conducted in the vicinity of the air monitoring station.

(2) Exceedance attributed to Project truck traffic at Parcel 216 laydown area

(3) Exceedance attributed to excavation activities along Parcel 15 and Parcel 216.

(4) Exceedance attributed to Project truck traffic at Parcel 216 laydown area within the clean zone.

(5) Exceedance attributed to Project truck traffic along Bailey Scales Road.

Notes:

* Results not reported due to machine malfunction.
** UPWIND machine did not run, therefore percent allowable not calculable.
J Estimated result. Results if less than reporting limit.
ND Not detected.
(1) No work conducted in the vicinity of the air monitoring station.
(2) Exceedance attributed to Project truck traffic at Parcel 76 laydown area.
(3) Exceedance attributed to construction of clay berm in vicinity of Station 17.
(4) Exceedance attributed to Project truck traffic in Staging Area C.
(5) Exceedance attributed to Project truck traffic along Broomsage Rd.
(6) Exceedance attributed to Project truck traffic in Staging Area C within the clean zone.
(7) Exceedance primarily attributed to Project truck traffic along Broomsage Road bed ash addition may have contributed to exceedance.
(8) Exceedance attributed to clearing and grubbing in the area.
(9) Exceedance primarily attributed to Project truck traffic at Staging Area C along Broomsage Road. Bed ash addition may have attributed to exceedance.
(10) Exceedance attributed to excavation activities in the vicinity of Station 18.
(11) Exceedance primarily attributed to excavation activities in the vicinity of Station 19A.
(12) Exceedance attributed to excavation activities in the vicinity of Station 18A.
(13) Exceedance attributed to excavation work in floodplain.

Notes:

* Results not reported due to machine malfunction.

** UPWIND machine did not run, therefore percent allowable not calculable.

(1) Exceedance primarily attributed to excavation work in former Staging Area C.

(2) Exceedance primarily attributed to excavation work in floodplain.

(3) No work conducted in the vicinity of the air monitoring station.

(4) Exceedance primarily attributed to berm reconstruction at Broomsage Road.

(5) Exceedance primarily attributed to excavation work in the vicinity of the air monitoring station.

(6) Exceedance primarily attributed to trucking activities in the vicinity of the air monitoring station.

Notes:

* Results not reported due to machine malfunction.

** UPWIND machine did not run, therefore percent allowable not calculable.

(1) Exceedance attributed to rock breaking activities.

(2) Exceedance attributed to Project truck traffic at Parcel 216 laydown area.

(3) Exceedance primarily attributed to Project truck traffic at Staging Area C. Bed ash addition may have contributed to exceedance.

(4) Exceedance attributed to Project truck traffic at Parcel 216 staging area.

(5) Exceedance attributed to haul road removal activities.

(6) Exceedance attributed to preparation of Parcel 22 staging area.

Notes:

* Results not reported due to machine malfunction.

** UPWIND machine did not run, therefore percent allowable not calculable.

J Estimated result. Results if less than reporting limit.

ND Not detected.

(1) Exceedance primarily attributed to Project truck traffic at Parcel 216 Staging Area.

(2) No work conducted in the vicinity of the air monitoring station.

(3) Exceedance primarily attributed to truck traffic on haul road through Parcel 22.

(4) Exceedance primarily attributed to truck traffic along on-site haul road.

(5) Exceedance primarily attributed to truck traffic along Broomsage Road.

(6) Exceedance primarily attributed to excavation work in former Staging Area C.

(7) Exceedance primarily attributed to excavation activities (bed ash addition, rock breaking, pressure washing) in the vicinity of the air monitoring station.

(8) Exceedance primarily attributed to rock breaking activities.

(9) Exceedance primarily attributed to Project personnel vehicle traffic near the monitoring station.

(10) Exceedance attributed to culvert replacement activities along Broomsage Road.

(11) Exceedance primarily attributed to restoration activities on Parcel 22.

(12) Exceedance attributed to traffic along the temporary gravel section of Broomsage Road.

(13) Exceedance attributed to backfill activities on Parcel 22 in the vicinity of the air monitoring station.

Notes:

* Results not reported due to machine malfunction.

** UPWIND machine did not run, therefore percent allowable not calculable.

(1) Exceedance primarily attributed to excavation activities in the vicinity of Station 25.

(2) Exceedance primarily attributed to excavation activities in the vicinity of Station 19A.

(3) Exceedance attributed to excavation work in floodplain.

(4) Exceedance attributed to Project truck traffic at Staging Area F.

(5) October 6th, Station 25 moved to Station 25A and Group 10 renamed Group 10A.

Notes:

* Results not reported due to machine malfunction.

** UPWIND machine did not run, therefore percent allowable not calculable.

(1) Exceedance attributed to Project truck traffic at Staging Area F.

(2) No work conducted in the vicinity of the air monitoring station. Exceedance attributed to street sweeping activities.

(3) Exceedance attributed to excavation activities in the vicinity of the air monitoring station.

(4) Exceedance attributed to hydroseeding activities in the vicinity of the air monitoring station.

(5) Exceedance primarily attributed to Project truck traffic on Peerless Road and Bud Ikerd Road.

(6) Exceedance primarily attributed to Project truck traffic on Peerless Road.

(7) Exceedance attributed to stone placement in Diversion Channel 2.

Notes:

* Results not reported due to machine malfunction.

** UPWIND machine did not run, therefore percent allowable not calculable.

(1) Exceedance attributed to Project truck traffic at Staging Area F.

(2) Exceedance attributed to stone placement in Diversion Channel 2.

(3) Exceedance primarily attributed to Project truck traffic on Peerless Road. Road wetting was reduced at the request of Lawrence County.

(4) No work conducted in the vicinity of the air monitoring station.

(5) Exceedance primarily attributed to Project truck traffic on Peerless Road. Road wetting was

(6) Exceedance primarily attributed to truck traffic along the on-site haul road.

(7) Exceedance primarily attributed to on-site trucking activities in the vicinity of the air monitoring station.

Notes:

* Results not reported due to machine malfunction.

** UPWIND machine did not run, therefore percent allowable not calculable.

RT Station 25B became a Real-time station on this date. Real-time stations do not report 'Total Volume' or 'Average Flow'. Concentrations are recorded every half hour by the station. The reported values are averaged over a 24 hour period starting at 8:00 AM.

(1) Exceedances attributed to project truck traffic, street cleaning, and bed ash mixing.

(2) Exceedance primarily attributed to road sweeping activities.

Notes:

RT Station 25C is a Real-time Station. Real-time stations do not report 'Total Volume' or 'Average Flow'. Concentrations are recorded every half hour by the station. The reported values are averaged over a 24 hour period starting at 8:00 AM.

(1) Data is anomalous. Work activities in the area were limited and do not support the spike observed in the TSP data.

(2) Exceedance due to increased working activities.

(3) Exceedance due to increased working activities and dry weather conditions.

(4) Exceedance due to increased working activities and less than average rainfall.

Notes:

* Results not reported due to machine malfunction.

** UPWIND machine did not run, therefore percent (%) allowable not calculable.

RT Station 28A became a Real-time station on this date. Real-time stations do not report 'Total Volume' or 'Average Flow'. Concentrations are recorded every half hour by the station. The reported values are averaged over a 24 hour period starting at 8:00 AM.

(1) Exceedance attributed to Project truck traffic at Staging Area F.

(2) High exceedance attributed to low flow and volume.

(3) Exceedance attributed to Project truck traffic at Staging Area G. No work conducted in the vicinity of the air monitoring station.

(4) Exceedance primarily attributed to bed ash mixing at Staging Area G.

(5) No work was conducted in the vicinity of the air monitoring station.

(6) Exceedance due to increased truck traffic and hot, dry conditions. Area is being wetted frequently to minimize dust.

(7) Data is anomalous. Work activities in the area do not support the spike observed in the TSP data.

(8) Exceedance due to increased work activities.

Notes:

* Results not reported due to machine malfunction.

(1) Exceedance attributed to Project truck traffic at Staging Area F.

(2) Exceedance primarily attributed to project truck traffic along the borrow area haul road.

(3) Exceedance due to generator being to close to TSP air monitoring station. Generator was in the process of being moved.

(4) Exceedance due to increased truck traffic along the haul road and dry road (dirt) conditions.

(5) Exceedance due to increased truck traffic and hot, dry conditions. Area is being wetted frequently to minimize dust.

(6) Exceedance due to increased working activities and higher than average temperatures.

(7) Data is anomalous. Work activities in the area were limited and do not support the spikes observed in the TSP data.

(8) Exceedance due to increased working activities.

(9) Exceedance due to increased working activities and dry work conditions.

(10) Exceedance due to increased work activities and less than average rainfall.

Dear Mr. Ramanauskas:

Re: Construction Certification Report
Bailey's Branch Creek and Tributary 3 Concrete Sealing – Spring 018 Interim Measure
GM CETC – Bedford Facility, IND 006036099
Bedford, Indiana

Enclosed for your review, please find a copy of the report entitled Construction Certification Report: Bailey's Branch Creek and Tributary 3 Concrete Sealing – Spring 018 Interim Measure. This document has been submitted by Conestoga-Rovers & Associates (CRA), on behalf of General Motors LLC (GM), to present the final construction certification of the Spring 018 Interim Measure in accordance with the approval dated June 19, 2013, and the concrete sealing design drawings submitted November 14, 2012 (and subsequent responses to comments emailed November 20, 2012).

Should you have any questions regarding this document, please do not hesitate to contact me at (708) 476-4793 or Cheryl Hiatt at (313) 510-4328.

Yours truly,

CONESTOGA-ROVERS & ASSOCIATES

James J. McGuigan, P.E.

Section 1.0 Introduction

1.1 General

This document presents the Construction Certification Report (Report) for concrete sealing activities within the Pleasant Run Creek Watershed (Bailey's Branch Creek and Tributary 3) Lawrence County, Indiana, associated with the implementation of the United States Environmental Protection Agency (U.S. EPA) approved Spring 018 Interim Measure (IM) Proposal, originally dated June 26, 2012 (final approved revision dated June 19, 2013), and the design drawings submitted November 14, 2012 (and subsequent responses to comments emailed November 20, 2012). The IM activities described herein were conducted from August 16, 2012 to April 1, 2013.

Bailey's Branch Creek and areas downstream were affected by historical releases of polychlorinated biphenyls (PCBs) from the General Motors LLC (GM) Castings, Engines, Transmissions and Components (CETC) Bedford Facility (Facility), formerly owned and operated by General Motors Corporation Powertrain. The Spring 018 area discussed in this Report forms part of the Facility Removal Action (RA) Site as defined in the Administrative Order on Consent (AOC) (effective July 31, 2003).

Conestoga-Rovers & Associates, Inc. (CRA) has prepared this Report on behalf of GM in accordance with the Resource Conservation and Recovery Act (RCRA) Corrective Action (CA) work conducted under the Performance Based Agreement (effective March 20, 2001, as amended October 1, 2002, March 29, 2007, May 9, 2008) with U.S. EPA for the Facility, and consistent with the AOC, under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA).

The Spring 018 area (Site) refers to a sub-section of the Pleasant Run Creek Watershed that is a hydrologically linked system of springs, swallets, sinkholes, groundwater and adjacent uplands areas. The Site location is presented on Figure 1.1. The Site Plan, including existing spring locations of the Spring 018 area, is presented on Figure 1.2. Swallets and springs formerly within the Spring 018 area on Parcels 15 and 216 were located within and adjacent to the creek channel, which is typically coincident with the property boundaries in this immediate area.

The work described in this Report was preceded by work conducted under the Downstream Parcels RA Work Plan (CRA, May 25, 2004) and investigations completed under the Site Source Control (SSC) Work Plan (CRA, November 11, 2003). The Downstream RA Work Plan consisted of soil and sediment excavation and proper disposal, verification sampling to document attainment of the cleanup objectives, and restoration of the creek, including filling and covering select swallets with concrete upon such verification. The SSC Work Plan and addenda included: identification of swallets and springs through visual inspections; thermal imaging; sampling of spring water to identify potential PCB impacted areas; installation and sampling of boreholes and rock corings; geophysical surveys conducted with ground penetrating radar and electromagnetic groundwater mapping; and dye tracer studies. Additionally, temperature studies were performed in the Spring 018 area in 2012 and 2013 to assist in the

identification of potential flow pathways contributing to the Spring 018 discharge. Based on the information collected during the SSC Work Plan implementation, water from the Spring 018 area was identified as impacted with low level PCB concentrations and GM instituted collection and treatment of the impacted water emanating from Spring 018.

This Report documents the completion of the IM concrete sealing activities performed in accordance with the Spring 018 IM Work Plan, which was formally approved by U.S. EPA on June 19, 2013, although the implementation of the work preceded the formal approval and U.S. EPA was kept informed of progress throughout the implementation of the work and provided comments to the design. Creek sealing activities began in December 2012 and were completed in March 2013. A photographic log of historical Spring 018 Site conditions and construction activities related to the concrete sealing is presented in Appendix A.

1.2 Report Organization

The Report is organized in the following sections:

i) Section 1.0 presents the Site location, a brief introduction to the history of the work performed in the Spring 018 area, and organization of the Report

ii) Section 2.0 summarizes activities completed in the Spring 018 area during the initial Downstream RA and presents a summary of Spring 018 monitoring results to date

iii) Section 3.0 provides the rationale for implementation of the concrete sealing activities to meet the IM objectives and the basis of the design

iv) Section 4.0 presents a summary of the IM activities

v) Section 5.0 presents references cited in this Report

vi) Section 6.0 provides certification of the Spring 018 IM construction completion

Section 2.0 Spring 018 Background and Monitoring Results

2.1 Spring 018 Investigations and Background Summary

The water produced at the current Spring 018 location initially consisted of several springs, including Spring 018, Spring 021-002, Spring 021-003, Spring 021-004, and Spring 021-005. The locations of the seeps and springs within the Spring 018 area are presented on Figure 2.1[1]. Historical sampling of these

[1] Removal of sediment, soil and rock from the mouth of Spring 018 was completed under the Downstream Parcels RA activities. As the RA excavation extended into the limestone bedrock and hillside, the physical location of where the Spring 018 water discharged to the creek changed, resulting in the consolidation of the down-gradient springs to a single source, renamed as interim sampling locations Spring 018A, Spring 018B, and the current location, Spring 018C. Although the current and interim locations represent different physical settings, they are understood to represent the water originally observed at Spring 018.

springs indicated the presence of PCBs at various levels exceeding the 0.3 micrograms per liter (µg/L) action level, with the majority of spring flow observed emanating from Spring 018.

Two dye trace studies were completed in 2004 at the suspected sources for water which feed the springs, including several swallets located upstream of Spring 018 within Bailey's Branch Creek and sinkholes located within a farm field to the east on Parcel 14. Dye trace studies conducted on July 8 and July 21, 2004 on the upstream swallets and sinkholes to the east concluded that the water entering the swallets and sinkholes exited the underground conduit system and discharged to the creek at Spring 018. The dye exited the conduit system fairly rapidly and moved through the system without significant dispersion (i.e., as a slug), indicating a relatively direct flow path and limited underground storage. The results of these tests were provided in the RCRA Facility Investigation (RFI) Technical Memorandum for Swallet Testing (CRA, September 27, 2004).

The water discharging from Spring 018 was found to originate from:

1. Surface water seeping through the fractured rock of the creek bed (swallets) just upstream of the Spring 018 area
2. Groundwater flowing in overburden and the fractured bedrock along the western bank of the creek, west of Spring 018
3. Groundwater flowing from the east of Spring 018, including water introduced through a series of sinkholes located on Parcels 14 and 15

Soil, sediment and bedrock removal and concrete filling of select excavated swallets within Bailey's Branch Creek upstream of the Spring 018 area began in 2004. Removal Action work was completed in 2005. Bedrock removal in the creek channel upstream of Spring 018 extended to depths exceeding 10 feet (ft) below the original creek bed in select areas in order to remove PCB impacted media within bedrock fractures at the major swallet areas (Swallets 1A, 1B, 2, 3, 4, 5, 6, and 8). Rock removal at Spring 018 began on July 18, 2005, moving upstream/upgradient approximately 10 ft into the rock face, resulted in the consolidation of the springs in the study area with the exception of the main discharge at Spring 018 (the downgradient seeps and springs dried up). Excavation around Spring 018 was completed on August 17, 2005. The final and current discharge point, following soil, sediment and bedrock removal, is identified as Spring 018C for sampling identification purposes.

As part of the initial interim restoration work in the Spring 018 area, the bedrock excavations in the major swallet areas were backfilled with rock and Standard Type II Portland Cement with nylon fiber reinforcement (fiber-reinforced concrete) designed to yield 4,000 pounds per square inch (psi) compressive strength. Exposed bedrock walls were covered with shotcrete mixed with nylon fiber reinforcement designed to yield 4,000 psi compressive strength. Filling and shotcrete work was completed by August 2005. The filling of the former swallet areas with rock and concrete significantly

reduced the observed flow from Spring 018. Although the cleanup work lowered the concentrations in the spring water, it did not lower it sufficiently to allow the spring to discharge water directly to the creek and temporary treatment of the water before discharge was initiated.

At that time, the area surrounding and downstream of Spring 018 was bermed with a clay dam in order to collect the PCB-impacted water emanating from Spring 018. The collected water was pumped to a temporary water treatment plant constructed on top of the hill southeast of Spring 018 on Parcel 216. The spring water was treated using a combination of settling/flow equalization in two one-million gallon Modular Tanks, followed by sand and carbon filtering prior to discharge back to the creek, downstream of the Spring 018 containment berm. This water was periodically tested to ensure the treated water met the U.S.EPA requirements for discharge of the water.

Upon completion of the interim restoration work, three separate qualitative dye trace investigations were conducted in the Spring 018 area, starting July 2007, as part of the SSC Addendum No. 5 (CRA, November 9, 2006). The purposes of the dye trace investigations were to:

- Evaluate the effectiveness of the concrete filling of the swallets and surrounding creek bed and to see if additional areas of the creek were contributing to the flow at Spring 018
- Monitor and evaluate various potential groundwater flow paths between the area of former Swallet 1A and Spring 018
- Monitor and evaluate potential groundwater flow paths from the east (upgradient) sinkholes and associated bedrock on Parcel 14

In addition to the dye trace investigations, two geophysical studies were conducted by Willowstick Technologies, LLC (Willowstick) and CRA, to identify apparent groundwater flow pathways within the bedrock and to further delineate the area of the Spring 018 groundwater drainage basin. The flow pathways identified by the geophysical studies are shown on Figure 2.1.

Results of the geophysical studies and dye trace investigations supported results from previous dye trace studies showing flowpaths connecting Spring 018 to the upstream swallets. The studies were submitted to U.S. EPA on April 12, 2006. The results indicated that the pathways had not been completely sealed off during the RA excavation and concrete filling activities. A connection between the upgradient sinkholes to the east was also shown to exist with similar low storage capacity based on the fairly quick response time observed during the dye tracer studies.

A bedrock drilling/coring investigation was completed in March and April 2007, targeting the pathways identified by the geophysical investigations. The investigation did not definitively locate any conduits that had been previously identified by the geophysical studies, but did confirm water is likely transported through fractured bedrock zones in the general vicinity of those pathways. The results were

summarized in the SSC Investigation Summary and Proposed RA Approach – Spring 018C, dated November 14, 2008. Figure 2.1 shows the location of the coreholes.

A new work plan proposing additional visual dye trace observations was submitted to U.S. EPA on September 7, 2012. The Work Plan was designed to divide up Bailey's Branch Creek and Tributary 3 into discrete, isolated sections so as to provide direct and conclusive evidence of the location of any existing swallet areas losing surface water and contributing to the overall volume being discharged at Spring 018. The dye trace tests confirmed that a portion of the water emanating from Spring 018 continued to be a result of isolated recharge from the creek. Results were provided to U.S. EPA in CRA's memo dated November 26, 2012.

2.2 Pre-Interim Measure Monitoring Summary

Monitoring of Spring 018 discharge rates, PCB concentrations, water temperature, and conductivity has been conducted prior to, during, and post IM concrete sealing activities implementation. The following sections present a summary of monitoring conducted prior to the completion of the IM.

2.2.1 Spring 018 Discharge Volumes

Water discharge volumes from Spring 018 have been attenuated through the various phases of work, including the temporary by-pass of significant portions of the surface water flow during the RA activities and the initial filling of excavated swallets. Prior to installation of flow meters on the Spring 018 pumps in 2012, discharge volumes were estimated based on visual observations of Spring 018. Prior to any remediation work being conducted in the area, Spring 018 had an estimated base flow discharge of 500 to 800 gallons per minute (gpm) and peak discharge during storm events estimated to be 3,000 to 5,000 gpm. Following the initial swallet filling activities completed in 2005, Spring 018 discharge was reduced to approximately 200 to 400 gpm during base flow conditions and approximately 500 to 1,000 gpm during storm events. It is noted that following the interim swallet filling and creek bed restoration work, creek flow over the area immediately upstream of Spring 018 was predominantly carried through by-pass piping that was temporarily installed to facilitate cleanup of the creek and made it difficult to evaluate flow into the Spring 018 regime. Following removal of the temporary by-pass piping (after further IM sealing efforts), the creek was allowed to return to natural flow paths.

2.2.2 PCB Sampling Results

Sampling of Spring 018 was initially performed as part of the initial spring and seep sampling event conducted in May 2002 under the RFI Stream investigation. Additional sampling of Spring 018 has generally been completed on at least a quarterly basis since the second quarter of 2004, with more frequent sampling generally ranging from daily to monthly during the RA and creek sealing activities. Samples are currently collected on a monthly basis with additional opportunistic samples collected once per quarter if a precipitation event of at least 1-inch of rain occurs within a 24-hour time frame.

Figure 2.2 shows the Spring 018 (including interim and final spring locations) monitoring results of PCB concentrations over time, through January 2014. Table 2.1 presents a summary of the monitoring analytical results. In general, a reduction in PCB concentrations has been observed through the course of RA activities, with the exception of periods of invasive work disturbances (i.e., excavation, pressure washing, rock breaking) which occasionally resulted in a small spike of PCB concentrations followed by further PCB concentration decreases. In addition to the overall downward trend since completion of the RA activities, a cyclical trend was noted prior to the IM concrete sealing activities with concentrations generally peaking during the warmer months and decreasing through the winter when concentrations were in recent years at or below the levels allowed for discharge.

2.2.3 Spring 018 Temperature Monitoring

Temperature monitoring was conducted in the Spring 018 area, commencing in July 2012, in order to identify potential relationships between the surface water temperature, groundwater temperature, and Spring 018 discharge temperature. If the temperature of water emanating from Spring 018 were to be consistently similar to the surface water temperature and dissimilar to upgradient groundwater, for example, it would suggest that Spring 018 is recharged primarily from that surface water.

Figure 2.3 plots the temperature versus time for upgradient groundwater monitoring locations (green lines), groundwater monitoring locations near the creek channel (purple lines), surface water in Bailey Scales Branch and Tributary 3 (blue lines), and Spring 018 water (red line). The initial readings were taken prior to the commencement of the additional concrete creek sealing work in late 2012. Figure 2.3 illustrates that in the summer of 2012, prior to conducting the creek sealing work and re-establishing the creek flow, the temperature of spring water and groundwater in proximity to the creek channel correlated more closely with the temperature of surface water in the creek than upgradient groundwater from wells located a further distance from the creek. This correlation is most particularly evident during the warmer summer months, when there is the maximum contrast in temperature between upgradient groundwater and surface water. This infers that the surface water flow within the creek channel (not otherwise conveyed in by-pass pipes) prior to creek sealing was still a source of recharge to spring water and is consistent with the findings of the 2012 dye-trace studies performed in the Spring 018 area.

Table 2.2 presents the summary of temperature field measurements.

2.3 Conclusions

The following summarizes the conclusions of the monitoring at Spring 018 performed prior to implementing the IM:

- Dye trace studies conducted in Bailey's Branch Creek and Tributary 3 in 2012 confirmed that pathways connecting surface water to the groundwater and Spring 018 in the areas surrounding the former swallets remained despite the swallet sealing efforts conducted in 2005.
- The discharge rate in Spring 018 remained weather dependent. Prior to the final concrete creek sealing work, the discharge rate was estimated to be generally 200 to 400 gpm in dry weather and 500 to 1,000 gpm or more in wet weather.
- Since completion of the RA sediment and rock removal and prior to the final concrete sealing, the PCB concentrations at Spring 018 had appeared to be cyclical, peaking during warmer summer months, with an overall trend of decreasing amplitude in the maximum (peak) concentration over time.
- Prior to implementing the IM, the peak PCB concentrations in Spring 018 water, generally above the action level of 0.3 µg/L, have typically occurred during the summer months and had a typical duration of about two to four months. These peak PCB concentrations were separated by periods of time when the PCB concentrations were at or below 0.3 µg/L, often during seasonally cooler weather.
- The spring water temperature at Spring 018 was influenced by the surface water temperature in the creek, suggesting the spring was being, at least in part, recharged by surface water via the swallets and fractures in the creek bed.

Section 3.0 Creek Sealing Objectives and Design Basis

Based on the completed investigations and monitoring results, a conceptual site model was developed for the Spring 018 area and presented in the aforementioned Proposed RA Approach (CRA, November 14, 2008). The final conceptual site model has been refined since this initial model by incorporating new data and information obtained over the past several years.

The source of the PCB impacts detected in water emanating from Spring 018 are believed to originate from the entrained PCB-contaminated sediment/clay material residing within the hydrogeologically active bedrock fractures between the various swallet locations and Spring 018. During the summer and early fall months, relatively warm surface water infiltrates through the swallets, recharging the groundwater system near Spring 018 through historical pathways, which had previously left PCB impacted sediments. This fast flowing warm surface water recharges groundwater and dislodges clay particles as it flows through the fractured bedrock hydrogeologic system towards Spring 018. It is

hypothesized that reducing surface water recharge to groundwater flow (by changing the flow pathway) through these original fractures minimizes the water in contact with the entrained sediment, thereby lowering the PCB levels in the discharging spring water.

GM evaluated several remedial alternatives to determine the most appropriate IM for Spring 018. In order to minimize the amount of surface water entering the groundwater system near Spring 018 from the fractures within the creek bed, GM determined the most efficient and effective IM would be to perform additional concrete sealing of the creek bed, both upstream of and directly adjacent to the Spring 018 area. If successful, this IM would limit the recharge of warmer surface water in the summer and early fall months, which resulted in the exceedance of the action level at Spring 018, as well as hopefully reduce the discharge from the spring.

In addition to the creek bed sealing, a permanent containment berm would be constructed to contain water discharging from Spring 018. By-pass piping would extend through the berm in order to allow Spring 018 to flow directly into the creek, if the water was not required by U.S. EPA to be collected for treatment. Valves on the piping would allow for cutoff of the flow and containment for collection and treatment, if needed. U.S. EPA and GM agreed to a contingency plan by which routine sampling results would be used to determine if Spring 018 water requires capture and treatment prior to being introduced in the creek system. This plan was provided to U.S. EPA in CRA's memo dated September 9, 2013.

The design basis for the concrete sealing of Bailey's Branch Creek and Tributary 3 was to provide a low permeability concrete seal over the creek bottom and form a base to support the restoration of the creek channel and banks in this area. The purpose of the sealing was to further minimize infiltration of surface water in the location of the former swallet areas. Creek base flow would be channeled near the center of the creek cross-section to reduce surface water from entering groundwater. The design assumes a v-channel such that the final concrete surface is shaped from the creek banks down towards the center of the creek, with slopes between 4 and 17 percent, as required, to convey flow for a 1 in 10-year storm event within the v-channel. The Spring 018 containment berm elevation was set to prevent the expected 1 in 100-year storm from flooding (or damaging) the Spring 018 berm.

The general cross-section of the concrete sealing cover consists of:

- Stone and concrete mix base fill layer over the bedrock, where necessary, of varying thicknesses, to bring the creek base to a generally uniform level with decreasing elevation from upstream to downstream. Base fill concrete near the walls was generally thicker to give the overall channel a 'V'' form.
- In areas where swallets have been identified as contributing to the discharge at Spring 018, the concrete seal consists of a geosynthetic clay liner (GCL) placed within 8 inches of concrete (2-inches below and a minimum 6-inches above).

- In areas with no identified swallets or where existing swallets have been shown to not have a direct connection to Spring 018, the concrete seal consisted of a 4-inch layer of concrete over top of the base fill concrete or bedrock.

As-built drawings from the IM are presented in Appendix B. Drawing C-01 presents the limits of GCL placement in addition to the overall concrete placement limits. Drawing C-07 presents general cross-sections of the construction.

Section 4.0 Concrete Sealing Interim Measure Activities

This section presents activities implemented as part of the Spring 018 and Bailey's Branch Creek/Tributary 3 concrete sealing IM.

4.1 Site Preparation

Site preparation activities were completed prior to initiating concrete sealing activities. Where possible, resources already in place for the East Plant IM and the CERCLA RA were used in conjunction with the creek sealing activities. The following is a list of activities previously completed in conjunction with other Site investigative and cleanup efforts:

- Mobilized construction facilities, material, equipment, and personnel necessary to perform the work
- Provided and maintained construction facilities
- Assembled construction support facilities (Site trailers, first aid facilities, break facilities, tool and material storage areas).

The following is a list of Site preparation activities for the Spring 018 IM not already completed in conjunction with other Site investigative and cleanup efforts:

- Performed surveys of private and public utilities
- Established erosion/sediment transport controls
- Removed sediment and vegetation accumulation from bedrock surfaces
- Removed select creek bypass controls (piping, earthen dams, temporary culverts) used during creek cleanup activities, but not needed for the concrete capping activities.

4.2 Erosion/Sediment Transport Controls

Erosion/sediment controls were put in place prior to initiating creek bed cleaning and concrete sealing activities to control the potential migration of sediment from the work areas. Select creek by-pass

controls used during the creek cleanup activities were left in place and relocated as needed throughout the bedrock cleanup and the various concrete pours. These erosion/sediment controls were removed as part of the final restoration of the work area.

4.3 Bedrock Cleaning

During the previous RA, the creek bed in the Spring 018 area had been excavated to bedrock and in most cases, had several feet of surficial bedrock removed. However, natural stream and erosion processes in this area over the past few years had resulted in sediment deposits and vegetative growth over the previously cleaned bedrock surface. In preparation for the concrete placement, the general contractor removed the vegetation and loose debris from the creek bed and re-cleaned the bedrock surface by pressure washing the creek floor. In a few areas, small rock outcrops were removed from the planned channel area to accommodate a continuous creek bottom slope as part of the final concrete sealing channel design.

4.4 Spring 018 Containment Berm Improvements

Prior to beginning the Spring 018 containment berm reinforcement activities, sediment that had accumulated within the containment berm area since its original construction in 2005 was removed, characterized, and properly disposed. The bedrock surface within the containment berm area was power washed and the bedrock surface was sealed with a layer of fiber-reinforced concrete to form a smooth base floor to the spring.

The existing clay containment berm around Spring 018 was refurbished with additional clay to bring the top of the berm to the design final grade and to adjust its overall base footprint in preparation for the resumption of normal flow through the creek channel alongside the berm, upon completion of the overall concrete sealing. A 4 to 6-inch layer of stone was placed on top of the clay to provide a surface for the concrete to adhere to.

An approximate 12-inch thick layer of fiber-reinforced concrete was placed over the entire berm (top and sides) once the top of the berm elevation and base footprint were achieved. To maintain the slopes of the berm's clay core, concrete was placed on the top of the berm with workers pushing the concrete down the side slopes to the extent practical, resulting in horizontal-to-vertical slopes ranging from 0.6:1.0 to 0.8:1.0 (i.e., concrete thickness at base of slopes likely thicker than at the top of slopes). The surface of the concrete was left rough to minimize slippage for samplers/workers in this area.

The second 12-inch fiber-reinforced concrete layer over the berm was placed as a single pour at the same time as the pour for the 4-inch layer of fiber-reinforced concrete placed on the creek floor within the containment area and the creek floor exterior to the berm. Steps were cast into the concrete surface at the upstream end of the berm to facilitate access to Spring 018 by sampling and maintenance personnel and to allow exit from the containment area. The final top elevation of the concrete covered

berm is approximately 562 ft above mean sea level (AMSL). Berm improvements were completed on December 13, 2012, in conjunction with the creek sealing activities.

Prior to refurbishing the clay berm, two 8-inch diameter high-density polyethylene (HDPE) pipes were placed through the downstream end of the Spring 018 containment berm. Each pipe was fitted with a gate valve, located on the exterior wall of the containment berm. The pipes were then sealed into the berm system as the concrete berm layers were placed. Hydra Stop 300, a hydrophobic urethane foam grout, was formed around the pipe where the pipes protruded through the berm (following concrete placement and curing) to prevent seepage. These pipes were installed to facilitate direct discharge of contained water to the creek if spring water collection and treatment is not required. The gate valves remained closed during the periods when Spring 018 water was collected for treatment.

4.5 Concrete Base Layer

A base layer consisting of a mixture of fiber-reinforced concrete and stone (where required) was placed along the length of the creek bed to adjust the channel floor elevations to a generally more consistent slope, and across the width of the creek bed to create and maintain a stable flow regime (upstream to downstream) with base flow events contained to the center line of the creek through an obtuse 'V' shaped channel.

The concrete mixture, comprised of standard Type II Portland Cement with fibrillated microsynthetic fibers (also known as fiber-reinforced concrete), which was designed to yield 4,000- (psi) compressive strength, consisted of 564 pounds (lbs) of cement, 1,280 lbs of sand, 1,750 lbs of #8 limestone, 1 lb of fiber, 33 ounces of water reducer, 12 lbs of a water proofer, 236 lbs of water, and frost guard depending on the day's temperature (specification provided in Appendix C.1). Fiber-reinforced concrete was selected as opposed to regular Type II Portland Cement for the design to provide additional strength and help to reduce the permeability of the overall concrete mixture. Additives to reduce shrinkage and cracking and chemical treatment additives for waterproofing were also included in the mixture to achieve the lowest permeability and optimum flexibility. The concrete was supplied by Irving Materials, Inc. (IMI). Each batch of concrete delivered to the Site was accompanied by a load ticket verifying the mixture.

The base layer concrete mix was generally placed in depressions in the creek bed to create the consistent slope and along the squared edges of the creek bed to form the basic 'V' design of the channel. Stone was placed in deeper areas of the creek to act as filler and reduce the amount of concrete required, as well as provide workability for thicker concrete placement (i.e., allow workers to walk over a surface of stone and not sink too far into wet concrete during placement). The contractor surveyed the final elevation of the base layer to confirm design elevations were met and to ensure there were no bedrock outcroppings that might protrude through the final (surface) concrete layer. The base

layer concrete surface was given a textured finish for the subsequent application of the GCL (where applicable) and the final concrete sealing layer.

Concrete cylinder samples were collected daily by Professional Service Industries, Inc. (PSI) for compressive strength testing according to ASTM C-39 [standard test method for compressive strength of cylindrical concrete specimens]. Each sample exceeded the target compressive strength of 4,000 psi (Appendix C.2).

Base-layer concrete generally began with the stretch of concrete upstream of the Bailey's Branch and Tributary 3 confluence, followed by the stretch of creek downstream of the confluence. This work was performed between November 9, 2012 and January 9, 2013. The base-layer concrete at the confluence was poured once the creek sealing activities upstream and downstream of the creek were complete. This was done to prevent damage by construction equipment traversing the area while completing the restoration in the adjacent areas. The base layer concrete was poured between February 12 and 14, 2013.

4.6 Permanent Spring 018 Conveyance Pipe Lines

As a contingency measure, two 10-inch diameter HDPE pipes were embedded in the bottom portion of the concrete base layer across the bottom of the creek, such that they were placed beneath the final concrete sealing layer. The pipes extend from within the reinforced Spring 018 berm to a point approximately 137 ft to the southwest (Drawing C-02, and cross section B on Drawing C-08 in Appendix B shows the detail for these pipes). These two pipes would facilitate future pumping of water from within the Spring 018 containment berm (if required) to a future water treatment facility located west of the creek, without restricting creek flow with overland piping. Currently, the pipe ends have been capped.

4.7 Geosynthetic Clay Liner

GCL was placed, according to the manufacturer's specifications, with a minimum overlap of six inches between panels (Appendix C.3), over select areas of the concrete base layer. GCL was placed over areas identified in the 2012 dye trace study as having a water-loss downward, through the creek bed, to Spring 018, primarily the Swallet 2/3 area, Swallet 9, and the fractured area just upstream of Spring 018C (Drawing C-02 in Appendix B). Water was applied to the GCL along the seams to ensure adequate hydration/sealing of the bentonite powder at the overlaps.

4.8 Concrete Sealing Layer

The final upper concrete sealing layer was placed over the concrete base and GCL layers. The same 4,000 psi compressive strength fiber-reinforced concrete mix used for the base layer was specified for the concrete sealing layer (Appendix C.1). The final concrete pour in the creek was generally completed

as a continuous pour (on a daily basis) to the extent possible, from downstream to upstream, with any overlapping pours resulting in a downstream facing seam. The continuous pours were completed as 4-inch or 8-inch thick lifts (per the design specifications) using a boom-arm concrete pumper truck, keeping heavy equipment off of the base concrete and GCL layers (it should be noted that where 8-inch thick concrete lifts were required, the bottom 2 inches were installed as part of the base concrete layer prior to placement of the GCL such that the final placed concrete surface layer was 6 inches thick). Where the concrete sealing layer was placed over the GCL covered areas, a small amount of water was applied to the GCL to pre-saturate the liner and prevent the bentonite clay in the GCL from drawing water out of the concrete mixture prior to the concrete hardening.

As part of the restoration of this portion of the creek, nodules, or bumps of concrete, generally 6 inches to 36 inches across and approximately 3 to 6 inches high were hand-formed in the concrete surface outside of the creek centerline. These nodules were formed into the sealing surface to provide a more natural looking creek surface and to collect sediment during base flow in order to encourage potential future vegetative growth within the channel.

A large depression in the bedrock near the Swallet 7, just upstream of Spring 018, was left as a pool formation (pond) within the creek profile. The 2012 dye trace test showed this area to be relatively sealed off from Spring 018 (i.e., not hydraulically connected), so it was left as a small waterfall and pool habitat feature within the creek. The 4-inch concrete sealing layer was applied to the base and sides of the pool with a target pool base flow elevation of 564.75 ft AMSL.

Concrete for the final layers were poured between January 15 and February 15, 2013. Concrete cylinder samples were collected daily by PSI to test the compressive strength of the concrete. Tests were performed in accordance with ASTM C-39 [standard test method for compressive strength of cylindrical concrete specimens]. Each sample exceeded the target compressive strength of 4,000 psi (Appendix C.2).

4.9 Cable Concrete Low-Flow Crossing and Maintenance Road

A low-flow crossing and access road was constructed across the creek at the confluence of Tributary 3 and Bailey's Branch Creek, as well as an access road along the east bank of Bailey's Branch Creek, downstream of the confluence, to maintain service access to the Spring 018 berm area. Concrete under the crossing and access road was reinforced with #6 steel reinforcing rods on 12-inch centers in a crossing pattern. Cable concrete type CC45 mats (4-foot by 8-foot mats comprised of interlocking concrete blocks, each roughly 12 inches square and 6 inches high, held together by steel cables) were placed over the reinforced sealing layer of concrete. The cable concrete mats define the driving surface of the access road in areas where the road was constructed over concrete and allow for stream flow through/across the road (i.e., between cable concrete blocks).

4.10 Concrete Surface Inspection and Crack Repair

Due to the large surficial area of the concrete pours completed, some minor shrinkage cracking of the concrete was expected and did occur. The final concrete surface was inspected and identified cracks were sealed. Repairs were completed using liquid concrete crack sealant (Quikrete Brand Gray Concrete Crack Sealant) for smaller hairline cracks and a combination of the liquid concrete crack sealant covered with polyurethane enhanced concrete crack sealant (Quikrete Brand Polyurethane Concrete Crack Sealant) for larger cracks, as recommended by the concrete supplier (IMI). A flexible scraper was used to push sealant into the cracks and smooth the surface over the repair.

4.11 Resumption of Creek Flow and Monitoring

Following receipt of the concrete test results and completion of the concrete patching (crack repairs), the temporary creek by-pass piping and check dams were removed and the creek water was allowed to return to its natural flow path within the concrete-lined creek bed on April 1, 2013.

Figure 2.2 and Table 2.1 present the PCBs analytical results for Spring 018, including monitoring conducted subsequent to the resumption of flow to the main creek channel on April 1, 2013. Figure 2.2 depicts relatively steady concentrations (less than 0.3 µg/L) following the resumption of flow through Bailey's Branch Creek and Tributary 3. PCB concentrations from Spring 018 samples collected in the summer of 2013 showed no change when compared to samples collected during seasonally cooler portions of the year, as had been typically observed in the past.

Figure 2.3 presents the results of temperature monitoring conducted from July 2012 through October2013 (May 2013 creek readings were taken shortly after a cold snap which explains the sharp drop in surface water temperature). Prior to sealing the creek, spring water temperature at Spring 018 more closely followed the temperature of surface water in the creek. Following completion of the restoration work and re-establishing the entire creek flow, the temperature of the spring water and that of the surface water diverges. Additionally, groundwater temperature near the creek channel after completion of the sealing correlates more closely with upgradient groundwater temperature. These metrics indicate that the surface water recharge to Spring 018 via swallets in the creek bed has been largely eliminated as a result of the concrete sealing activities.

4.12 Interim Measure Summary

The completed as-recorded topographic plan views for the final concrete sealing, cross-sections along the length of the creek centerline, sections across the width of the channel, and construction details are presented in Appendix B on Drawings C-01 through C-09.

4.13 Post-Interim Measure Summary

The following summarizes significant observations of the monitoring performed at Spring 018 after construction of the IM:

- Discharge from Spring 018 continues to be weather dependent, estimated since April 2013 to be 200 to 400 gpm during base flow conditions, and 400 to 800 gpm following storm events. This represents an estimated decrease of approximately 50 to 60-percent during base flow and approximately 85-percent during wet weather peak discharge when compared to pre-RA implementation (original flow conditions).
- PCB concentrations from Spring 018 samples in prior years exhibited a cyclic increase during the summer and decrease during the cooler months. Sample results from the summer of 2013, after completion of the concrete sealing activities, showed no significant increase in PCB concentrations when compared to results for samples collected during the balance of the year, despite air temperatures ranging from 90° to low 100°s Fahrenheit. Since the initiation of the additional creek concrete sealing activities in December 2012, PCB concentrations (samples are collected monthly) have remained below the action level (0.3 µg/L) . At the time of writing, the twelve month rolling PCB average (March 2013 through February 2014) is 0.14 µg/L (February 2014 sample results not yet validated).
- Water temperature at Spring 018 generally more closely reflects upgradient groundwater temperatures than upstream surface water temperatures, indicating Spring 018 is currently being recharged primarily by upgradient groundwater rather than surface water.

The monitoring results collected to date support the assertion that the concrete sealing activities have further isolated Spring 018 from swallets and creek bed fractures located within Bailey's Branch Creek. The concrete sealing activities have decreased the discharge at Spring 018, and sampling has indicated a continued and sustained overall decrease in PCB concentrations due to decreased flow through the fractured hydrogeologic system, formerly supplied by surface water in-flows at the swallets.

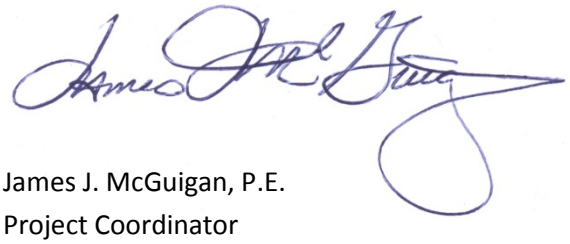
CRA, Memo from Jim McGuigan to Peter Ramanauskas, et.al., Re: Spring 18 Interim Measure, September 9, 2013

Willowstick, Delineation of Groundwater Flow Pathways Near Spring 018C, March 17, 2006.

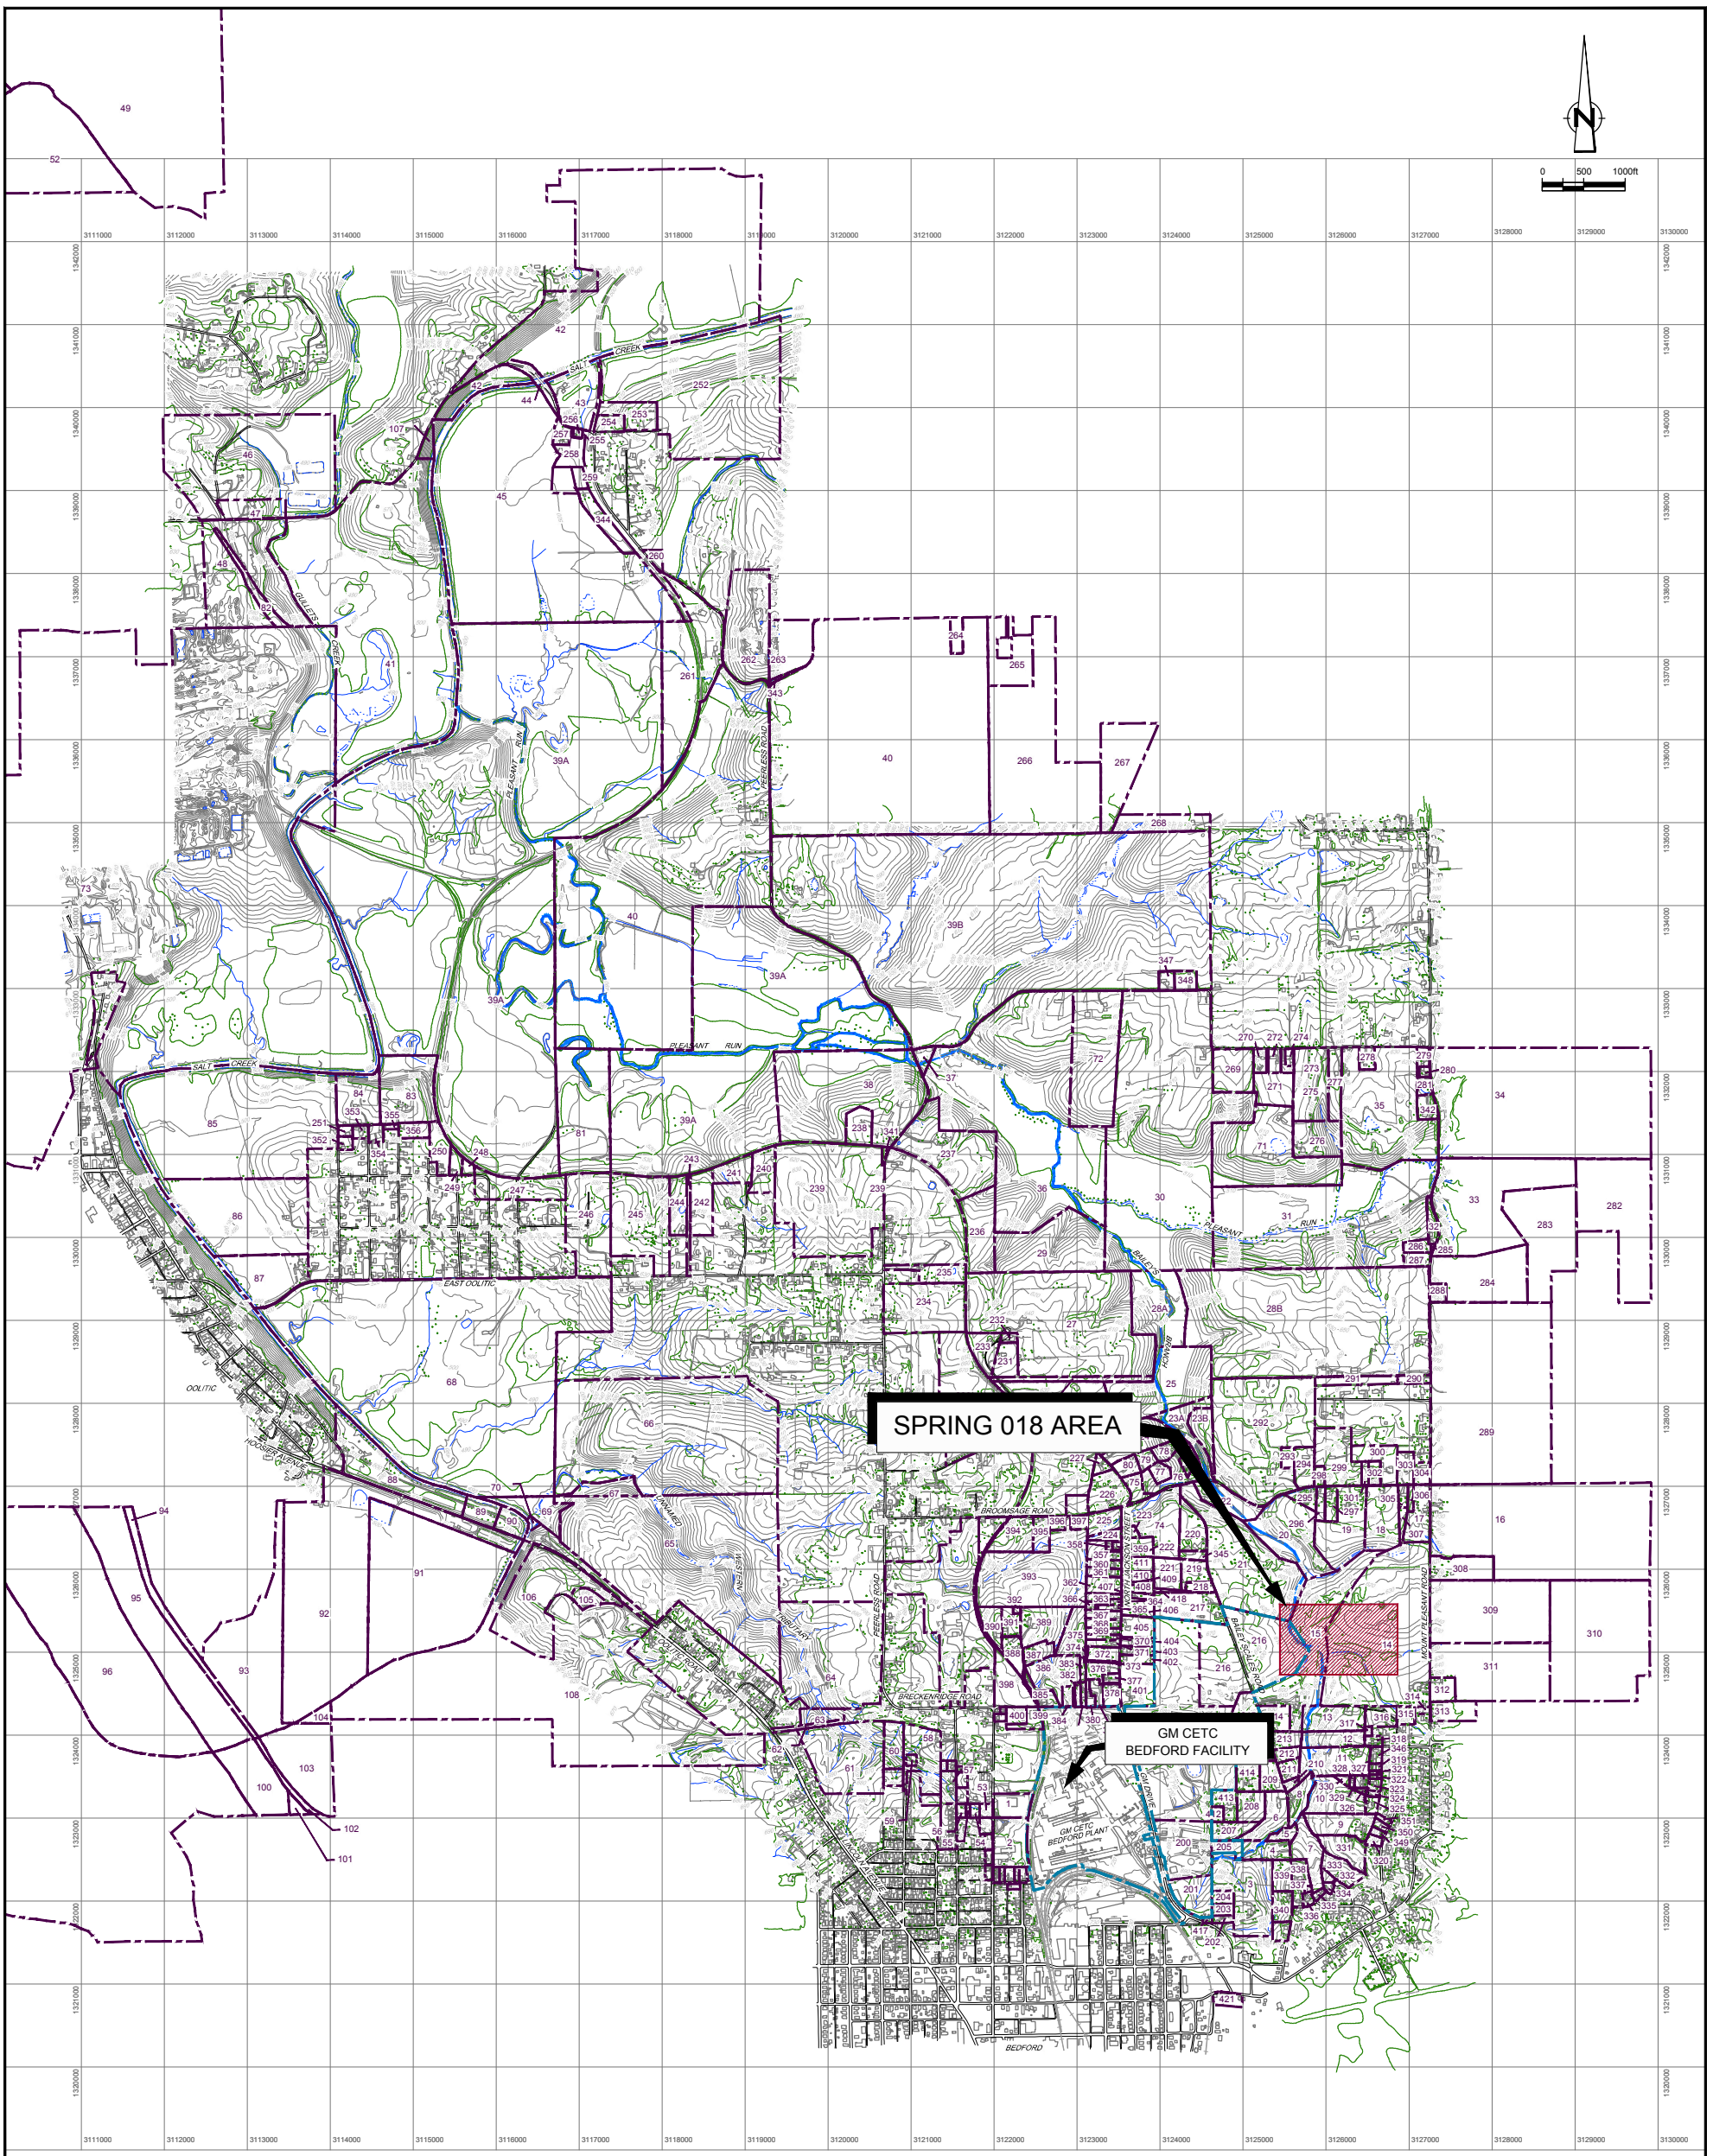
Section 6.0 Construction Certification

Under penalty of law, I certify that, to the best of my knowledge, after appropriate inquiries of all relevant persons involved in the preparation of this report, the information submitted is true, accurate, and complete. I am aware there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Respectfully Submitted,



James J. McGuigan, P.E.
Project Coordinator



LEGEND

- EXISTING GROUND SURFACE ELEVATION CONTOURS (feet AMSL)

GM CETC BEDFORD FACILITY BEDFORD, INDIANA

CONESTOGA-ROVERS & ASSOCIATES

RECORD DRAWINGS
THIS RECORD DRAWING HAS BEEN PREPARED, IN PART, BASED ON INFORMATION FURNISHED BY OTHERS. WHILE THIS INFORMATION IS BELIEVED TO BE RELIABLE, CRA CAN NOT AND DOES NOT WARRANT ITS ACCURACY AND/OR COMPLETENESS, AND THUS SHALL NOT BE RESPONSIBLE FOR ANY ERRORS OR OMISSIONS WHICH MAY HAVE BEEN INCORPORATED HEREIN AS A RESULT. THOSE RELYING ON THIS RECORD DRAWING ARE ADVISED TO OBTAIN VERIFICATION OF ITS ACCURACY AND/OR COMPLETENESS BEFORE USING IT FOR ANY PURPOSE.

NΩ	Revision	Date	Initial

LEGEND

- AS-BUILT GROUND SURFACE ELEVATION CONTOURS (feet AMSL)
- APPROXIMATE PROPERTY BOUNDARY
- V-CHANNEL ALIGNMENT
- EXISTING CONCRETE CAP (2005 SURVEY)
- AS-BUILT CONCRETE SEALING LIMIT
- AS-BUILT CONCRETE SEALING AREA (TYPICALLY 4" THICK)
- AS-BUILT 8" THICK CONCRETE SEALING AREA WITH GCL
- AS-BUILT CABLE CONCRETE TYPE CC45 AREA
- AS-BUILT SPRING 18 BERM RECONSTRUCTION
- AS-BUILT CONCRETE BUMPS AT RANDOM LOCATIONS (VARIOUS SIZES 6" TO 36")
- FORMER SPRING LOCATION
- FORMER SWALLET LOCATION
- SPRING LOCATION

NOTES:

1. TOP OF CONCRETE CONSTRUCTED WITH A ROUGHENED AND UNDULATING SURFACE THAT PROVIDE COLLECTION AREAS FOR MIGRATING SOIL AND ROCK AND MIGHT ENHANCE THE POTENTIAL FOR NATURALLY OCCURRING VEGETATION OVER SEVERAL YEARS. THE MINIMUM REQUIRED THICKNESS OF 4" OR 8" (AS APPROPRIATE) MAINTAINED OVER THE CONCRETE BASE FILL GRADES, WITH ADDITIONAL CONCRETE PLACED AT RANDOM LOCATIONS THROUGHOUT THE CONCRETE SEALING AREA TO CREATE A MORE NATURAL APPEARANCE (I.E., NOT STRICTLY SMOOTH CONCRETE CHANNEL) BUT STILL MAINTAIN THE GENERAL FLOW PATTERN TOWARDS THE CENTER OF THE CONCRETE CHANNEL. THESE UNDULATIONS DO NOT OCCUR WITHIN THE APPROXIMATE 5-FOOT CENTER SECTION AT STA. OF THE CONCRETE CHANNEL SO AS NOT TO INTERRUPT BASE LOW FLOW CONDITIONS.
2. BOUNDARY BETWEEN PARCELS 14 AND 15 SURVEYED BY BLEDSOE RIGGERT GUERRETTAZ (APRIL 2011). ADJACENT PROPERTY BOUNDARY LOCATIONS APPROXIMATED FROM THE LAWRENCE COUNTY SURVEY PLATS. ADJOINING PROPERTY LINES MAY NOT ACCURATELY REPRESENT THE TRUE PROPERTY BOUNDARIES

RECORD DRAWINGS

THIS RECORD DRAWING HAS BEEN PREPARED, IN PART, BASED ON INFORMATION FURNISHED BY OTHERS. WHILE THIS INFORMATION IS BELIEVED TO BE RELIABLE, CRA CAN NOT AND DOES NOT WARRANT ITS ACCURACY AND/OR COMPLETENESS, AND THUS SHALL NOT BE RESPONSIBLE FOR ANY ERRORS OR OMISSIONS WHICH MAY HAVE BEEN INCORPORATED HEREIN AS A RESULT. THOSE RELYING ON THIS RECORD DRAWING ARE ADVISED TO OBTAIN VERIFICATION OF ITS ACCURACY AND/OR COMPLETENESS BEFORE USING IT FOR ANY PURPOSE.

SCALE VERIFICATION

THIS BAR MEASURES 1" ON ORIGINAL. ADJUST SCALE ACCORDINGLY.

Approved

NOTES:

1. TOP OF CONCRETE CONSTRUCTED WITH A ROUGHENED AND UNDULATING SURFACE THAT PROVIDE COLLECTION AREAS FOR MIGRATING SOIL AND ROCK AND MIGHT ENHANCE THE POTENTIAL FOR NATURALLY OCCURRING VEGETATION OVER SEVERAL YEARS. THE MINIMUM REQUIRED THICKNESS OF 4" OR 8" (AS APPROPRIATE) MAINTAINED OVER THE CONCRETE BASE FILL GRADES, WITH ADDITIONAL CONCRETE PLACED AT RANDOM LOCATIONS THROUGHOUT THE CONCRETE SEALING AREA TO CREATE A MORE NATURAL APPEARANCE (I.E., NOT STRICTLY SMOOTH CONCRETE CHANNEL) BUT STILL MAINTAIN THE GENERAL FLOW PATTERN TOWARDS THE CENTER OF THE CONCRETE CHANNEL. THESE UNDULATIONS DO NOT OCCUR WITHIN THE APPROXIMATE 5-FOOT CENTER SECTION AT STA. OF THE CONCRETE CHANNEL SO AS NOT TO INTERRUPT BASE LOW FLOW CONDITIONS.

RECORD DRAWINGS

THIS RECORD DRAWING HAS BEEN PREPARED, IN PART, BASED ON INFORMATION FURNISHED BY OTHERS. Re: **G.M. Project — Bedford, Indiana**

We are pleased to resubmit the following mix designs for the above referenced project. Per ACI 318 and ASTM C-94, imi kindly requests that we receive copies of all concrete test reports for this project. They can be sent to technicalservices@irvmat.com

Description	**6 Bag Air Limestone**
imi Mix Number	**060**
Cement	564 lbs.
Sand	1280
#8 Limestone	1750
Fiber	1 lb.
Water Reducer	33 oz.
Waterproof	12 lbs.
W/C	0.42
Water	236 lbs.
Air	5-8 %
Slump	8" max.

HIGH RANGE WATER REDUCER (Superplasticizer): This admixture will be ordered in any of the above mix design by specifying ***SUP*** after the imi mix design number. The dosage rate of this admixture is 5-7 oz/cwt of cement. This will increase the maximum allowable slump to 8".

FIBER SECONDARY REINFORCING: This product will be added to the above mix design by specifying *CF* after the imi mix design number. A 1 lb. dosage of NYTECH will be added when requested per yard.

MATERIAL SUPPLIERS & SPECIFICATIONS:

Cement:	ASTM C-150: Type I-II or Type III, Lehigh (Mitchell, IN)
Admixtures:	ASTM C-494: Superplasticizer, Type F, Glenium 7500. BASF Optional: Non-chloride Accelerator, Polarset, Grace Construction Products ASTM C-260: Air entrainment, Micro Air, BASF Water-proofing admixture, Xypex C-1000, Xypex Corporation.
Aggregates:	ASTM C-33 & INDOT Specifications: #23 Sand, from Rogers Group (Morgan County); #8,¾" Limestone from Rogers Group (Springville, IN).
Fiber:	ASTM C-1116, Nytech CG, NMW, Inc.

Respectfully Submitted,

Rodney Haag

Material Safety Data Sheet

Revised: October 27, 2011
Replaces: August 6, 2004

Irving Materials, Inc.
Corporate Office: 8032 N State Road 9, Greenfield, IN 46140

1 -- IDENTIFICATION

Freshly Mixed Unhardened Concrete also called **Ready-Mixed Concrete**, **Portland Cement Concrete**, &/or **Flowable Fill**

2 -- PRODUCT AND COMPONENT DATA

Concrete is a mixture of Portland and other cements, gravel and/or crushed limestone, sand, and water. It may also contain fly ash, silica fume, fibers and/or chemical admixtures.

Ingredients	%	OSHA-PEL	NIOSH-REL	CAS No.
Portland Cement*	10 - 25	5.0 mg/m^3 respirable dust 15.0 mg/m^3 total dust	5.0 mg/m^3 respirable dust 10.0 mg/m^3 total dust	65997-15-1
Aggregates*	35 - 90	5.0 mg/m^3 respirable dust 15.0 mg/m^3 total dust	5.0 mg/ M^3 respirable dust 10.0 mg/m^3 total dust	Limestone 1317-65-3 Sand & Gravel None
Fly Ash*	0 - 15	5.0 mg/m^3 respirable dust 15.0 mg/m^3 total dust	5.0 mg/m^3 respirable dust 10.0 mg/m^3 total dust	68131-74-8
Slag Cement*	0 - 15	5.0 mg/m^3 respirable dust 15.0 mg/m^3 total dust	5.0 mg/m^3 respirable dust 10.0 mg/m^3 total dust	**
Water	5 - 25	None	None	77321-85
Crystalline Silica SiO_2	> 1	See note below*	See note below*	14808-60-7

**Each of these ingredients may have quartz [silica (SiO_2)] as a component. The percent of silica varies greatly from product to product and also within the same product. Silica exposure may occur when respirable dust is present. Dust is not present in Freshly Mixed Unhardened Concrete. The OSHA-PEL for respirable crystalline silica = 10 mg/m^3 ÷ (%SiO_2 + 2) and the ACGIH TLV for respirable silica = 0.05 mg/m^3.*

***Slag Cement may contain any or all of the following: Calcium Oxide, Fused Silca Oxide, Mangesium Oxide, Aluminum Oxide, Sulfur, Manganese Oxide, Postassium Oxide, Sodium Oxide, Titanium Oxide, and Ferric Oxide, CAS Nos.; 1305-78-8, 60676-86-0, 1309-48-4, 1344-28-1, 7704-34-9, 7439-96-5, 12136-45-7, 12401-86-4, 13463-67-7, 1309-37-1. Since Blast Furnace Slag Cement is manufactured from materials mined from the earth, and process heat is provided by burning fuels derived form the earth, trace but detectable amounts of naturally occurring metals, and possibly harmful elements may be found during chemical analysis. Ingredients are expressed as oxides for quantitative purposes. Actual oxides do not generally occur in "free form" but rather as complex silica-based glasses or crystals. May contain more than 0.1% of free crystalline silica.*

The chemical admixtures are present in quantities comprising less than 1%. These chemical admixtures can be both dry and/or liquid. Admixtures contained in Freshly Mixed Unhardened Concrete at the time of delivery would have no effect on the hazards associated with the use of Fresh Mixed Unhardened Concrete.

The hazardous ingredients associated with dust from concrete cannot become airborne in plastic (wet) concrete. When water is added to the dry ingredients a reaction occurs with the calcium oxide that is present to form calcium hydroxide, a high alkalinity chemical which can irritate the eyes and skin upon contact. The product is delivered as a ready mixed unhardened concrete. There is no dust hazard present from the wet product. An OSHA-PEL or a NIOSH-REL would not apply at the time of delivery.

Component product Material Safety Data Sheets are available upon request.

3-- PHYSICAL/CHEMICAL CHARACTERISTICS

Boiling Point	NA	**Specific Gravity** (H_2O = 1)	1.5 – 3.0
Vapor Pressure	NA	**Melting Point**	NA
Vapor Density (Air = 1)	NA	**Evaporation Rate** (Butyl Acetate = 1)	NA
Solubility in Water	Slight (0.01 to 1%)	pH (in water) (ASTM D 1293-95)	12 to 13
Appearance and Color	Odorless gray, plastic, flowable, granular mud		

4 -- FIRE AND EXPLOSION HAZARD

Flash point	NA	**Flammable Limits**	NA
LEL	NA	**UEL**	NA
Extinguishing Media	NA	**Special Fire Fighting Procedures**	NA
Unusual fire and Explosion Hazards	None		

5 -- REACTIVITY DATA

Stability	Stable
Conditions to Avoid	None known
Incompatibility (Materials to avoid)	Strong Acids
Hazardous Decomposition Products	None known
Hazardous Polymerization	Will not occur

6 -- HEALTH HAZARDS

Emergency Overview: Short term exposure to wet concrete is not likely to cause an immediate hazard. However, freshly mixed unhardened (plastic) concrete has a high alkalinity level which can cause skin and eye irritation. Exposure of sufficient duration to wet concrete can cause serious, potentially irreversible tissue (skin or eye) damage in the form of chemical (caustic) burns. Take appropriate precautions to minimize direct contact with the product. See **Personal Protective Equipment** precautions in Section 7 below.

Routes of Entry: Skin Contact, Eye Contact, Ingestion

Effects of Acute Exposure: Plastic concrete can dry the skin and cause alkali burns (cement dermatitis). Prolonged exposure may irritate the skin and cause a burning sensation, particularly in areas of prior abrasion or irritation. Contact with plastic concrete can cause irritation of the eye. Ingestion may cause throat irritation.

Effects of Chronic Exposure: Hypersensitive individuals may develop an allergic dermatitis. This product may contain crystalline silica. Since freshly mixed unhardened concrete is a wet product, the risk of silica inhalation is negligible and should not present a significant health hazard.

Emergency and First Aid Procedures: Irrigate eyes with copious amounts of water. Wash exposed areas of the body with soap and water. Saturated or contaminated clothing should be removed and washed before re-use. If irritation persists, obtain medical attention.

Carcinogenic Potential: Freshly Mixed Unhardened Concrete is not listed as a carcinogen by NTP, OSHA, or IARC. Concrete frequently contains crystalline silica in concentrations greater than 0.1%,. Respirable crystalline silica is classified by IARC (International Agency for Research on Cancer) as a known human carcinogen and by NTP (National Toxicology Program) as "reasonably anticipated to be a carcinogen." Crystalline silica in wet concrete is not respirable and does not pose a health hazard. See **Additional Precautions** in Section 7 below.

7 -- PRECAUTIONS FOR SAFE HANDLING AND USE

Personal Protective Equipment: Use barrier creams, gloves, boots, and clothing to protect skin from prolonged contact with plastic concrete. Particularly protect abrasions of the skin from contact with plastic concrete. Wear safety glasses or goggles when placing methods cause splashing of the plastic concrete.

Waste Disposal Methods: Spills of plastic concrete should be allowed to harden, when it can be disposed of as common waste. All disposals should be accordance with local regulations.

Additional Precautions: Any cutting, grinding, or scarifying of dry hardened concrete can cause dusting of the concrete. Dust created in this fashion may contain crystalline silica. Repeated and prolonged inhalation of respirable crystalline silica in excess of appropriate exposure limits can cause scarring of the lungs or a progressive lung disease called silicosis. Silicosis may aggravate other chronic lung related conditions. Smoking is strongly suspected of aggravating the effects of silica exposure and may increase the risk of lung cancer. When cutting, grinding, or scarifying dry hardened concrete, appropriate precautions must be taken to prevent inhalation of the dust. Engineering controls such as dust suppression or capture should be employed. When this is not possible a NIOSH - MSHA approved respirator should be used when the TLV is exceeded.

Ready-Mixed Concrete is not listed as a carcinogen by the International Agency for Research on Cancer (IARC), the National Toxicology Program (NTP), or the Occupational Safety and Health Administration (OSHA). In October 1996, an IARC Working Group re-assessing crystalline silica, a component of this product, designated respirable crystalline silica as carcinogenic (Group 1). The NTP's Report on Carcinogens, 9th Edition, lists respirable crystalline silica as a "known human carcinogen". In year 2000, the American Conference of Governmental Industrial Hygienists (ACGIH) listed respirable crystalline silica (quartz) as a suspected human carcinogen (A-2). These classifications are base on sufficient evidence of carcinogenicity in certain experimental animals and on selected epidemiological studies of workers exposed to crystalline silica.

8 -- PREPARATION OF THIS DOCUMENT

PRODUCT DATA SHEET

XYPEX ADMIX C-1000

DESCRIPTION

Xypex is a unique chemical treatment for the waterproofing, protection and improvement of concrete. XYPEX ADMIX C-1000 is added to the concrete mix at the time of batching. Xypex Admix C-1000 consists of portland cement, very fine treated silica sand and various active, proprietary chemicals. These active chemicals react with the moisture in fresh concrete and with the by-products of cement hydration to cause a catalytic reaction which generates a non-soluble crystalline formation throughout the pores and capillary tracts of the concrete. Thus the concrete becomes permanently sealed against the penetration of water or liquids from any direction. The concrete is also protected from deterioration due to harsh environmental conditions.

XYPEX ADMIX C-SERIES

The Admix C-Series has been specially formulated to meet varying project and temperature conditions. Xypex Admix C-500 is specifically formulated to meet modern concrete practices that incorporate additives such as fly ash and slag. For most concrete mix designs adding the Admix C-500 will have minimal or no effect on setting time. Xypex Admix C-1000 is designed for typical Portland cement-rich concrete, where normal to a mild retarded set is desired. Xypex Admix C-2000 is designed for projects where extended retardation is required due to high ambient temperatures or long ready-mix delivery times. See Setting Time and Strength for more details. Consult with a Xypex Technical Representative for the most appropriate Xypex Admix for your project.

RECOMMENDED FOR:

- Reservoirs
- Sewage and Water Treatment Plants
- Secondary Containment Structures
- Tunnels and Subway Systems
- Underground Vaults
- Foundations
- Parking Structures
- Swimming Pools
- Pre-Cast Components

ADVANTAGES

- Resists extreme hydrostatic pressure from either positive or negative surface of the concrete
- Becomes an integral part of the substrate
- Highly resistant to aggressive chemicals
- Can seal static hairline cracks up to 0.4 mm
- Allows concrete to breathe
- Non-toxic
- Less costly to apply than most other methods
- Permanent
- Added to the concrete at time of batching and therefore is not subject to climatic restraints
- Increases flexibility in construction scheduling

PACKAGING

Xypex Admix C-1000 is packaged in 20 lb. (9.1 kg) pails, 60 lb. (27.2 kg) pails and 50 lb. (22.7 kg) bags. Admix C-1000 is also available in cartons containing 10 lb. (4.5 kg), 12 lb. (5.5 kg), and 15 lb. (6.8 kg) soluble bags. For specific projects, contact the manufacturer for availability of custom sized packaging.

STORAGE

Xypex products must be stored dry at a minimum temperature of 45°F (7°C). Shelf life is one year when stored under proper conditions.

DOSAGE RATES

Xypex Admix C-1000: 2% - 3% by weight of cement
Xypex Admix C-1000 NF (No Fines Grade): 1% - 1.5% by weight of cement

Note: Under certain conditions, the dosage rate for No Fines Grade may be as low as 0.8% depending on the quantity and type of total cementitious materials.

Consult with Xypex's Technical Department for assistance in determining the appropriate dosage rate and for further information regarding enhanced chemical resistance, optimum concrete performance, or meeting the specific requirements and conditions of your project.

TEST DATA

PERMEABILITY

U.S. Army Corps of Engineers CRD C48-73 "Permeability of Concrete" Aviles Engineering Corp., Houston, USA

Two concrete samples containing Xypex Admix at 3% and 5% respectively, and an untreated control sample were tested for water permeability. Both the treated and untreated samples were subjected to a pressure of 150 psi (350 ft. waterhead). Results showed moisture and permeated water throughout the untreated sample after 24 hours. However, the Xypex Admix samples showed no leakage, and water penetration of only 1.5 mm after 120 hours (5 days).

U.S. Army Corps of Engineers CRD C48-73 "Permeability of Concrete" Setsco Services, Pte Ltd, Singapore

Six Xypex Admix-treated and six untreated concrete samples were tested for water permeability. Pressure was gradually increased over five days and then maintained at 7 bars (224 ft. waterhead) for 10 days. While the six reference samples showed water leakage beginning on the fifth day and increasing throughout the test period, the Xypex Admix samples showed no water leakage at any time during the test.

DIN 1048 "Water Impermeability of Concrete" DICTU S.A. Dept. Of Engineering and Construction Mgt., Santiago, Chile

Concrete samples 120 mm thick containing Xypex Admix were tested with the same size reference samples for water impermeability. Samples were subjected to hydrostatic pressure for 28 days. Water totally permeated the untreated samples but no water penetration was detected in any of the Xypex Admix-treated samples.

COMPRESSIVE STRENGTH

ASTM C 39 "Compressive Strength of Cylindrical Concrete Specimens" HBT Agra, Vancouver, Canada

Concrete samples containing Xypex Admix at various dosage rates (1%, 2% and 5%) were tested against an untreated concrete control sample. Compressive strength test results after 28 days indicated a significant strength increase in the samples incorporating Xypex Admix. The compressive strength increase varied between 5% and 20% (depending on the Xypex Admix dosage rate) over that of the reference sample.

ASTM C 39 "Compressive Strength of Cylindrical Concrete Specimens" Kleinfelder Laboratories, San Francisco, USA

At 28 days, the compressive strength test of the concrete containing Xypex Admix measured 7160 psi as compared to the reference sample at 6460 psi (a 10% increase).

CHEMICAL RESISTANCE

JIS "Chemical Durability Test" Japanese Utility Company, In-house Test Report, Tokyo, Japan

Concrete samples containing Xypex Admix were tested against five samples containing other admixtures and against a control sample, to determine resistance to corrosion and deterioration caused by contact with aggressive chemicals. All samples were soaked in a 5% sulfuric acid solution at 20°C for six months. Various evaluations and measurements were assessed every month during the test period, including: photographic comparisons, relative dynamic modulus of elasticity, percentage change in length, weight and flexural rigidity. Although the Xypex Admix sample was subjected to acid conditions well outside its published range, the results confirmed Xypex with the best performance among the seven samples tested.

"Sulfuric Acid Resistance Test" Aviles Engineering Corporation, Houston, USA

Concrete samples containing Xypex Admix at different dosage rates (3%, 5% and 7%) were tested against untreated control samples for Sulfuric acid resistance. After immersion in the Sulfuric acid, each sample was tested for weight loss on a daily basis until a weight loss of 50% or a definite response trend was obtained. The percentage weight loss of the samples containing Xypex Admix tested significantly lower than the control samples.

"Sulphate Resistance Test" Taywood Engineering Ltd., Perth, Australia

Xypex Admix-treated concrete samples were immersed in an ammonium-sulphate solution and tested for "resistance in a harsh environment". The performance of the Xypex-Crystalline-Technology was compared with five other concretes, including one containing a sulphate-resistant cement. Each of the test samples was cured for seven days and then placed in an ammonium-sulphate solution (132 g/l) for 180 days. The rate of corrosion was determined by measuring weight loss, and length change was noted on a weekly basis. The Xypex-Crystalline-Technology substantially improved concrete performance as compared to the reference concrete and tested very similar to the sulphate-resistant concrete. The Xypex Admix-treated samples also provided the highest level of protection as measured by change in length.

FREEZE/THAW DURABILITY

ASTM C 666 "Freeze/Thaw Durability" Independent Laboratory, Cleveland, USA

After 300 freeze/thaw cycles, the Xypex Admix-treated samples indicated 94% relative durability.

POTABLE WATER EXPOSURE

NSF 61 "Drinking Water System Component-Health Effects" NSF International, Ann Arbor, USA

Exposure testing of potable water in contact with Xypex-treated samples indicated no harmful effects.

DIRECTIONS FOR USE

Xypex Admix C-1000 must be added to the concrete at the time of batching. The sequence of procedures for addition will vary according to the type of batch plant operation and equipment:

1. READY MIX PLANT - DRY BATCH OPERATION Add Xypex Admix in powder form to the drum of the ready-mix truck. Drive the ready-mix truck under the batch plant and add the balance of the materials in accordance with standard concrete batching practices. Mix materials for a minimum of 5 minutes to ensure that the Xypex Admix has been thoroughly dispersed throughout the concrete.

2. READY MIX PLANT - CENTRAL MIX OPERATION Mix Xypex Admix with water to form a very thin slurry (e.g. 15 - 20 lb./6.75 - 9 kg of powder mixed with 3 gallons/13.6 litres of water). Pour the required amount of material into the drum of the ready-mix truck. The aggregate, cement and water should be batched and mixed in the plant in accordance with standard practices (taking into account the quantity of water that has already been placed in the ready-mix truck). Pour the concrete into the truck and mix for at least 5 minutes to ensure even distribution of the Xypex Admix throughout the concrete.

3. PRECAST BATCH PLANT Add Xypex Admix to the rock and sand, then mix thoroughly for 2 - 3 minutes before adding the cement and water. The total concrete mass should be blended using standard practices.

Notes:

1. It is important to obtain a homogeneous mixture of Xypex Admix with the concrete. Therefore, do not add dry Admix powder directly to wet concrete as this may cause clumping and thorough dispersion will not occur.

2. Concrete containing the Xypex Admix does not preclude the requirement for design of crack control, construction joint detailing and measures for repairing defects in concrete (i.e. honeycombing, tie holes, cracks beyond specified limits).

For further information regarding the proper use of Xypex Admix for a specific project, consult with a Xypex Technical Representative.

SETTING TIME AND STRENGTH

The setting time of concrete is affected by the chemical and physical composition of ingredients, temperature of the concrete and climatic conditions. Xypex Admix C-1000 is designed for typical Portland cement-rich concrete, where normal to a mild retarded set is desired. Concrete containing the Xypex Admix C-1000 may develop higher ultimate strengths than plain concrete. Trial mixes should be carried out under project conditions to determine the setting time and strength of the concrete dosed with Xypex Admix C-1000. Consult with a Xypex Technical Representative for the most appropriate Xypex Admix for your project.

LIMITATIONS

When incorporating Xypex Admix, the temperature of the concrete mix should be above 40°F (4°C).

TECHNICAL SERVICES

For more instructions, alternative installation methods, or information concerning the compatibility of the Xypex treatment with other products or technologies, contact the Technical Services Department of Xypex Chemical Corporation or your local Xypex Representative.

SAFE HANDLING INFORMATION

Xypex is alkaline. As a cementitious powder or mixture, Xypex may cause significant skin and eye irritation. Directions for treating these problems are clearly detailed on all Xypex pails and packaging. The Manufacturer also maintains comprehensive and up-to-date Material Safety Data Sheets on all its products. Each sheet contains health and safety information for the protection of workers and customers. The Manufacturer recommends you contact Xypex Chemical Corporation or your local Xypex representative to obtain copies of Material Safety Data Sheets prior to product storage or use.

WARRANTY

The Manufacturer warrants that the products manufactured by it shall be free from material defects and will be consistent with its normal high quality. Should any of the products be proven defective, the liability to the Manufacturer shall be limited to replacement of the product ex factory. The Manufacturer makes no warranty as to merchantability or fitness for a particular purpose and this warranty is in lieu of all other warranties expressed or implied. The user shall determine the suitability of the product for his intended use and assume all risks and liability in connection therewith.

Commercial Grade
Division 3

NYTECH® CG

Performance Concrete Fibers

Nytech® CG (Commercial Grade) Nylon monofilament fibers reduce early plastic shrinkage cracking and provides multi-dimensional secondary reinforcement that cannot be achieved with WWF.

Nytech® CG fibers improve long term durability as well as quantifiable engineering properties. **Nytech® CG** fibers will always be positioned correctly with millions of fibers dispersed evenly throughout the concrete.

Nytech® CG fibers conform to ASTM C 1116, ICC-ES AC32, and numerous Federal, State and Local Codes.

Benefits:

- CG Fibers provide 3-Dimensional reinforcement
- Provides plastic shrinkage crack reduction
- Provides secondary/temperature - shrinkage crack reduction
- Easily finished with non-hairy concrete
- Significant time and labor cost savings over WWF
- Improves overall durability of the concrete
- Easier to pump without equipment clogs
- Greater fatigue strength and Impact resistance than WWF
- Reduces Permeability

Applications:

- Commercial, Industrial, Warehouse and Residential Slabs-on-ground
- Decorative Concrete
- Shotcrete
- Precast Concrete
- Composite Elevated Decks

General Specification:

Nytech® CG is a monofilament nylon that meets the requirements of ASTM C - 1116, Section 4.1.3 and Note 3. Additionally **Nytech® CG** meets ICC ES AC32 Section 3.1.1 (Plastic Shrinkage Reinforcement) and Section 3.1.2 (Secondary/Temperature – Shrinkage Reinforcement). The standard dosage rate to meet this specification is 1.0 lbs / yd^3 (0.6 kg / m^3). **Nytech® CG** is marketed by NMW, Inc., 6553 West 400 North, Greenfield, IN 46140. Phone: (800)253-4237, Fax: (317)891-1019.

Nytech® CG

Installation:

Nytech® CG fibers are packaged in pre-weighed paper/degradable bags that are added to the mix at the batch plant. To ensure even fiber disbursement, do not add concurrently with cement. If added after all the standard ingredients, then continue to mix for an additional 3 – 5 minutes.

Normal Dosage rate for **Nytech® CG** fibers is 1 pound / yd^3 of concrete.

Packaging:

Standard Packaging for **Nytech® CG** fibers is:

1lb bags	30 bags / box, 36 boxes/skid
5lb bags	6 bags / box, 36 boxes/skid

Optional Packaging:

9lb bags*	3 bags / box, 36 boxes/skid
10lb bags*	3 bags / box, 36 boxes/skid

*Additional Charges Apply

Physical Properties:

Specific Gravity	1.16
Denier Range	2 – 7
Melting Point	490° - 510° F
Alkali & Chemical Resistance	Excellent
Water Absorption	4 – 5%
Color	Natural

Shipping Policy:

NMW, Inc. utilizes multiple shipping points around the country and can have products virtually anywhere in the US in 1 - 2 days.

All LTL shipments/deliveries are fob plant.*

*Some exceptions apply

Limitations:
Nytech® CG fibers are intended to reduce plastic shrinkage cracking and provide secondary/temperature-shrinkage reinforcement. **Nytech® CG** should not be used as structural reinforcement. NMW, Inc. warrants that the product sold hereunder is of merchantable quality and conforms to seller's standards and specifications. Seller's sole liability for claim shall be limited to replacement of defective or non-conforming product. In no event shall seller be liable for any special, incidental, consequential, or exemplary damages. NMW, Inc. recommends that each user determine the suitability of the product(s) for their own particular application.

Certificate of Conformance
GLENIUM® 7500
BASF Construction Chemicals, LLC* Admixture for Concrete

(*Previously doing business as BASF Admixtures, Inc. and prior to that as Degussa Admixtures, Inc. and Master Builders, Inc.)

I, Richard Hubbard, Sr. Technical Marketing Specialist for BASF Construction Chemicals, LLC , Cleveland, Ohio,certify:

That GLENIUM 7500 is a high-range water-reducing admixture manufactured by BASF Construction Chemicals, LLC; and

That no calcium chloride or chloride based ingredient is used in the manufacture of GLENIUM 7500; and

That GLENIUM 7500, based on the chlorides originating from all the ingredients used in its manufacture, contributes less than 0.00017 percent (1.7 ppm) chloride ions by weight of the cement when used at the rate of 65 mL per 100 kg (1 fluid ounce per 100 pounds) of cement; and

That GLENIUM 7500 meets the requirements for a Type A, Water-Reducing and Type F, Water-Reducing, High Range Admixture specified in ASTM C 494, Corps of Engineers' CRD-C 87 and AASHTO M194, the Standard Specifications for Chemical Admixtures for Concrete.

Project Name: Annual Certification
Product Selected: Polarset®

This is to certify that the Polarset, a Accelerator, as manufactured and supplied by Grace Construction Products, W.R. Grace & Co. – Conn., is formulated to comply with the Specifications for Chemical Admixtures for Concrete, ASTM: C494, Type C, AASHTO: M194, Type C.

Polarset does not contain calcium chloride or chloride containing compounds as a functional ingredient. Chloride ions may be present in trace amounts contributed from the process water used in manufacturing.

The foregoing is in addition to and not in substitution for our standard Conditions of Sale attached.

Concrete Field Report

Report No: FC:0014921-4
Issue No: 1

Client: SEVENSON ENVIRONMENTAL
320 GM DRIVE, CONSTRUCTION TRAILER
BEDFORD, IN 47421

CC: DAN SEKANOVICH
SHANE REYNOLDS

Project: GM BEDFORD SPRING 18
BEDFORD, IN

These test results apply only to the specific locations and materials noted and may not represent any other locations or elevations. This report may not be reproduced, except in full, without written permission by Professional Service Industries, Inc. If a non-compliance appears on this report, to the extent that the reported non-compliance impacts the project, the resolution is outside the PSI scope of engagement.

Approved Signatory: Christopher Carson (Project Manager)
Date of Issue: 11/28/2012

General Field Data

Technician: John Staples
Test Date: 11/9/2012
Weather: Sunny

Test Results

PRODUCT DATA SHEET

GSE BentoLiner NWL-35 Geosynthetic Clay Liner

GSE BentoLiner "NWL-35" is a needlepunched reinforced composite geosynthetic clay liner (GCL) comprised of a uniform layer of granular sodium bentonite encapsulated between a nonwoven and a scrim-nonwoven geotextile for dimensional stability. The product is intended for moderate to steep slopes and moderate to high load applications where increased internal shear strength is required.

[*]

AT THE CORE:
This composite clay liner is composed of a uniform layer of granular sodium bentonite between a nonwoven and scrim-nonwoven textile for dimensional stability.

Product Specifications

Tested Property	Test Method	Frequency	Value
Geotextile Property			
Cap Nonwoven, Mass/Unit Area	ASTM D 5261	1/200,000 ft²	6.0 oz/yd² MARV(1)
Carrier Scrim Nonwoven, Mass/Unit Area	ASTM D 5261	1/200,000 ft²	6.0 oz/yd² MARV
Bentonite Property			
Swell Index	ASTM D 5890	1/100,000 lb	24 ml/2 g min
Moisture Content	ASTM D 4643	1/100,000 lb	12% max
Fluid Loss	ASTM D 5891	1/100,000 lb	18 ml max
Finished GCL Property			
Bentonite, Mass/Unit Area(2)	ASTM D 5993	1/40,000 ft²	0.75 lb/ft² MARV
Tensile Strength(3)	ASTM D 6768	1/40,000 ft²	45 lb/in MARV
Peel Strength	ASTM D 6496 ASTM D 4632(4)	1/40,000 ft²	5.3 lb/in MARV 35 lb MARV
Hydraulic Conductivity(5)	ASTM D 5887	1/Week	5 x 10^{-9} cm/sec max
Index Flux(5)	ASTM D 5887	1/Week	1 x 10^{-8} m³/m²/sec max
Internal Shear Strength(6)	ASTM D 6243	Periodically	500 psf Typical
TYPICAL ROLL DIMENSIONS			
Width x Length(7)	Typical	Every Roll	15.5 ft x 150 ft
Area per Roll	Typical	Every Roll	2,325 ft²
Packaged Weight	Typical	Every Roll	2,600 lb

NOTES:
- (1)Minimum Average Roll Value.
- (2)At 0% moisture content.
- (3)Tested in machine direction.
- (4)Modified ASTM D 4632 to use a 4 in wide grip. The maximum peak of five specimens averaged in machine direction.
- (5)Deaired, deionized water @ 5 psi maximum effective confining stress and 2 psi head pressure.
- (6)Typical peak value for specimen hydrated for 24 hours and sheared under a 200 psf normal stress.
- (7)Roll widths and lengths have a tolerance of ±1%.

GSE is a leading manufacturer and marketer of geosynthetic lining products and services. We've built a reputation of reliability through our dedication to providing consistency of product, price and protection to our global customers.

Our commitment to innovation, our focus on quality and our industry expertise allow us the flexibility to collaborate with our clients to develop a custom, purpose-fit solution.

1.0 INTRODUCTION

This manual provides an overview of the GSE Installation Quality Assurance procedures consistent with industry accepted practices to ensure that the GSE BentoLiner GCL products installed will best perform for its intended purpose. In addition, all installation work will be performed in strict accordance per the customer's specifications. Please read the procedures below completely before you begin. If you need further clarification, contact the GSE Engineering Support Staff for assistance or please refer to ASTM D 6102, Standard Guide for Installation of Geosynthetic Clay Liners and ASTM D 5888, Standard Guide for Storage and Handling of Geosynthetic Clay Liners. Remember safety first and use safe practices always on every project.

2.0 UNLOADING PROCEDURES

As with all lifting or unloading operations, appropriate equipment and experienced personnel should be employed along with proper safe handling methods. The party responsible for unloading the GSE BentoLiner should contact GSE prior to shipment to determine the correct unloading methods and equipment if different from the pre-approved and specified methods as described below.

Lifting GCL rolls can typically be accomplished with by using a 2.5 in - 3.0 in (63 mm - 75 mm) outside diameter (O.D.) steel pipe (preferably solid), with a wall thickness capable of providing sufficient beam strength to support the weight of the roll, which average less than 3,000 lb (1,364 kg) and the length is approximately 18 ft (5.5 m). This core pipe is inserted through the hollow center of the GCL cardboard core. Heavy-duty slings or chains, which are approximately 10 ft (3.1 m) long, each are attached to each end of the pipe, which are then fastened to a I-beam spreader bar or a GSE approved alternative. Care should be taken to ensure that lifting chains or straps do not rub, chafe, or otherwise damage the GCL. A crane, backhoe, front-end loader or another suitable piece of construction equipment can then lift the entire assembly.

An all-terrain, extendable boom forklift, such as a Lull or Caterpillar Telehandler, can be fitted with a special, solid steel "carpet pole" or stinger, typically 14.0 ft (4.3 m) in length having an outside diameter of no more then 3.38 in (8.6 mm). The carpet pole can be inserted into the hollow cardboard core of the GCL roll.

The roll should not be fully suspended until the pole extends through the entire length of the core tube or you run the risk that the core may break creating additional handling and unloading difficulties

A properly structured and supported pole can be used to unload GCL rolls onsite. As an alternative, straps that are appropriately rated can be used as a GSE approved lifting method to unload GCL rolls. Lifting straps are supplied on every roll. Each GCL roll label contains roll weight information that should be consulted in determining appropriate lifting equipment and factors of safety.

The CQA inspector or owner's representative should verify that only appropriate handling equipment is utilized, i.e. equipment that does not pose any danger to personnel or undue risk of damage or deformation to the liner material.

3.0 STORAGE

While stored GCL needs to be kept dry and away from potential flooding or high storm runoff. On the job site storage methods include; storing the rolls tarped on pallets; storing the rolls under roof in a clean, dry protected area; and storing the rolls on a flat, dry, stable surface suitably covered with protective waterproof tarps. Rolls can be stacked as long as it is done in a manner that prevents them from rolling, shifting, or spontaneously moving. Maximum roll height should be determined by CQA personnel, but never more than can be safely managed considering site conditions, equipment and personnel.

Stored rolls should be tarped and remain in their original, unopened plastic shipping sleeves to prevent damage and undue prehydration prior to installation. Any rolls that come in contact with water should be examined by CQA or an owner's representative prior to installation. Prehydrated or physically damaged rolls should be set aside for further examination to determine the plausibility of repair or need to replace.

4.0 SUBGRADE PREPARATION

The surface upon which the GSE BentoLiner is installed should be smooth and free of wheel ruts, debris, roots, sticks, and rocks larger than 1.0 in (25 mm). Site specific compaction requirements should be followed in accordance with the project plans and specifications. At a minimum, the site should be smooth rolled the level of compaction such that installation equipment and other construction vehicles traffic does not cause rutting greater than 1.0 in (25 mm) deep. Furthermore, all protrusions extending more than 0.5 in (12 mm) from the subgrade shall be removed, crushed, or pushed into the subgrade.

In applications where the product is the sole barrier, subgrade surfaces consisting of gravel or granular soils may not be acceptable due to their large void content. For these applications, the subgrade shall be greater than 80% fines and contain no particles larger than 1 in (25 mm). In all high head, water containment applications, i.e. maximum water depth greater than 1 ft (30.5 cm), GSE recommends the use of a coated or laminated GCL such as GSE BentoLiner CNSL.

Immediately prior to deployment of the GCL, the subgrade shall be final compacted to fill in any remaining voids or desiccation cracks and to ensure that no sharp irregularities or abrupt elevation changes exist greater than 1.0 in (25 mm). The surfaces to be lined shall be maintained in this condition and free of standing water. GCL can be deployed on a frozen subgrade, if the subgrade would meet all the conditions as previously outlined if unfrozen.

The subgrade surface and preparation should be inspected and certified by the CQA inspector prior to GSE BentoLiner placement. Upon approval by the CQA inspector, it is the geosynthetic installer's responsibility to communicate to the engineer of any changes in the condition of the subgrade that might render it out of compliance, with any of the requirements of the project specification or ASTM Standard D 6102.

5.0 DEPLOYMENT

As rolls are selected for deployment, the labels should be removed and recorded by the installer, along with any other pertinent information. The rolls should only be transported from the storage area using approved lifting equipment as described in section 2.0. The roll is supported during deployment, so that the fabric designated as the upper surface faces out, away from the installation vehicle. The free end of the roll can then be secured, while the vehicle supporting the roll slowly backs away, deploying the GCL as it moves. Alternatively, the free end can be manually pulled across an area to be lined by the installation crew while the equipment simply suspends the roll. Equipment traveling directly on GCL for deployment of overlying geosynthetics should be limited to lightweight ATVs maximum bearing capacity of 8.0 psi (34.5 kPa) or equivalent.

Successive panels are overlapped according to project specifications and/or within the overlap lines stenciled on the upper surface of each panel. Wherever possible, installation of GSE BentoLiner should begin at high elevation and proceed to low elevation. This allows any precipitation to accumulate and drain quickly without adversely affecting the GCL. The edges of exposed GCL should be weighted down with sandbags or equivalent ballast to prevent uplift in the event of substantially strong winds.

Only as much GSE BentoLiner as can be fully covered by the end of the day should be deployed or such amount that can be covered in a reasonably short time in the event of heavy precipitation. When GCL is being installed under a geomembrane, the leading edge should be folded back under the membrane at the end of the construction day. Temporary ballasting, such as sandbags, to prevent uplift and the infiltration of runoff water should secure the leading edge of the membrane.

GSE BentoLiner panels should be installed in a relaxed condition, free of wrinkles and folds. When fitting the product into small areas or around construction details, use a sharp utility or hook blade knife to cut the liner to the appropriate dimensions. Adjacent panels should overlap at the edges as described in section 6.0 below.

6.0 OVERLAPS & SEAMS

Unless specified differently adjacent lengthwise (longitudinal) seams should be overlapped a minimum of 6.0 in (150 mm). Granular bentonite should be used to augment all overlapped seams. Loose granular bentonite is placed between ajoining panels into the overlap area at a rate of 0.25 lb per linear foot (350 g per linear meter) of seam. Widthwise overlaps at the butt ends of rolls should be a minimum 12.0 in (300 mm). Seams should be shingled in a down slope direction, so that water flows across the seam from upslope sheet to the down slope sheet.

When the liner is cut to fit in small areas, i.e. into corners or around structures, adjacent panels should overlap a minimum of 1.0 ft (300 mm), adding abundant loose granular bentonite into the overlapped areas.

7.0 ATTACHMENT DETAILS

he product should be installed around penetrations, structures, pipes, structures and other appurtenances according to the contract drawings. GSE BentoLiner may be secured to appurtenances by use of a stainless steel batten or clamps, mechanical fasteners, or other appropriate device if necessary to minimizing movement. The use of additional granular bentonite or bentonite paste is recommended to maximize the seal around structures or protuberances.

8.0 ANCHORING

GSE BentoLiner is typically anchored in a trench around the perimeter of the lined area, which provides the required pullout resistance. In most cases, GCL can be anchored in the same trench as any adjacent geosynthetic liner components (if used). Dimensions and locations of the trench should be provided in the project drawings. Alternately, the material may be anchored by deploying additional run out of material, a minimum of 3.0 ft (1.0 m), past the slope crest and toe. Typically GCL should not be deployed in tension. The force holding the GCL in place should be provided by friction between the GCL and adjacent materials

Steps should be taken to ensure that precipitation does not accumulate in the trench prior to backfilling. The GCL should only cover the front face and bottom of the anchor trench. The trench should be back filled and properly compacted prior to placing cover soil on the slopes.

9.0 REPAIRS

In the event an area of GSE BentoLiner becomes damaged, torn, or punctured during installation, the affected area should be repaired. On relatively level surfaces, the damaged area should be covered with a separate piece of GSE BentoLiner extending at least 12.0 in (300 mm) beyond the damaged area in every dirRection. Granular bentonite should be used to augment the patch overlays as is required for all other seams. Patches on side slopes can be temporarily secured with construction adhesive such as Liquid Nails or tape.

Areas that are exposed to standing water or excess precipitation with resulting bentonite hydration, typically as defined as greater than 30% moisture, prior to soil covering, should be examined for bentonite displacement and damage by subsequent activities. If it is determined that the GCL has been hydrated and damaged, the GCL should be covered with new material over the affected area or removed and replaced. All GSE BentoLiner material exposed to hydrocarbon fuels, chemicals, pesticides, non-compatible leachates, or other harmful liquids during the installation should be removed and replaced with non-affected material.

10.0 INSPECTION

Prior to soil covering the panels, penetrations and any other details should be visually inspected to ensure full coverage and proper orientation. Once the installed GSE BentoLiner material has been approved the next layer of geosynthetics or soil covering may be applied.

11.0 COVER MATERIAL

Only the amount of GSE BentoLiner GCL that can be anchored, inspected, and covered the same day should be installed. In cases where the GSE BentoLiner GCL is the sole hydraulic barrier, the GCL should be covered with the specified thickness of cover soil (a minimum 1.0 ft (300 mm)) immediately following deployment. Where GSE BentoLiner GCL is used in conjunction with other membrane components, it should be covered with the geomembrane after placement, as soon as possible to protect it from the climatic elements.

When a geomembrane is being installed over the GCL, the leading edge of the GSE BentoLiner should be folded back under the geomembrane so that the geomembrane extends beyond the GCL a minimum of 2.0 ft (600 mm). The leading edge of the membrane should subsequently be weighted with sand bags or suitable ballast to safeguard against wind uplift and to prevent runoff water from undermining the liner.

When GSE BentoLiner is used with no overlying geomembrane, the soil cover should be placed within 2.5 ft (800 mm) of the leading edge of the GCL. The leading edge can then be covered with plastic sheeting that is folded under the exposed edge approximately 12.0 in (300 mm). Sand bags or suitable ballast should be placed on the liner to hold the plastic in place and to partially confine the GCL. The next morning the ballast and the plastic can be removed and subsequent rolls of GCL placed as described in section 5.0.

Cover soil placed directly on GCL should have a gradation to not damage or puncture the GCL. Cover soil should be free of all rocks greater than 0.75 in (18 mm) diameter, sharp or angular objects, sticks, roots or debris. Appropriate placement methods should be used at all times to protect the GCL. Compatibility of GSE BentoLiner GCL with the soil should be verified. Cover material should be pushed across the seams from top to bottom to prevent the cover material from lodging between the overlapped panel seams.

12.0 HYDRATION & ACTIVATION

In applications where the product is used as the sole hydraulic barrier, such as secondary containment, the GCL must first be hydrated with fresh water. Non-aqueous chemicals will not activate the bentonite. Therefore, bentonite hydration via rainwater or sprinkler and irrigation is necessary. When hydrated, the GSE BentoLiner is an excellent barrier to hydrocarbon fuels, fertilizers, and other such chemicals.

Only after the cover material has been placed should the GSE BentoLiner be allowed to hydrate. Once hydration has occurred no vehicles should be allowed to traffic the area directly above the GCL, unless minimum 1.0 ft (300 mm) separation exists between the GCL and the vehicle to adequately distribute the vehicle load. This should be increased to a minimum of 2.0 ft (600 mm) in high traffic areas such as roadways.

Periodic inspection of the liner to ensure proper coverage and adequate moisture content is recommended when GSE BentoLiner is used alone under a minimum 1.0 ft (300 mm) depth of cover soil. In arid regions, it may be necessary to irrigate the containment area, at a predetermined interval and/or a laminated or coated GCL used and deployed with the plastic component up in order to minimize dessication and wet - dry cycling.

MEMORANDUM

TO:	Peter Ramanauskas (U.S. EPA)	REF. NO.:	013968
FROM:	P.G. Jim McGuigan (CRA)/ac/763	DATE:	August 25, 2014
C.C.:	Brad Stimple (U.S. EPA), Gerald O'Callahan (IDEM), Cheryl Hiatt (GM), Ed Peterson (GM), Bill Steinmann (CRA), Katie Kamm (CRA), Paul Gallaway (CRA)		
RE:	**Spring 018 Area – Additional Erosion Control/Concrete Sealing GM CET Bedford Facility Bedford, Indiana**		

This memorandum is provided to detail additional work upstream in proximity to the Spring 018 Area for the GM, LLC, CET Facility in Bedford, Indiana. Specifically, the following describes erosion control mitigation procedures implemented in July 2014.

Additional Erosion Control/Concrete Sealing Measures

In April 2013, GM completed concrete sealing on portions of Baileys Branch Creek and Tributary 3 as part of an Interim Measure to address Spring 018. The completed work is described in the February 20, 2014, report entitled: CONSTRUCTION CERTIFICATION REPORT, BAILEY'S BRANCH CREEK AND TRIBUTARY 3, CONCRETE SEALING, SPRING 018 INTERIM MEASURE. The design basis for the concrete sealing of Baileys Branch Creek and Tributary 3 was to provide a low permeability concrete seal over the creek bottom and form a base to support the restoration of the creek channel and banks in this area. The purpose of the sealing was to further minimize infiltration of surface water in the location of the former swallet areas. Creek base flow was channeled near the center of the creek cross-section to reduce surface water from entering groundwater.

During a routine inspection of the concrete sealed area within the creek channel, some undercutting erosion was noted along the margin of the concrete seal area adjacent to the hillside of the eastern bank of Baileys Branch Creek, just north of the confluence of Tributary 3. This area is immediately north of the cable-concrete crossing near the stone access road that runs northeasterly up the hill (see Attachment 1 for location and photographs). It appears that surface water drainage from the access road up the hill flowing southwesterly towards the creek and then down across the Spring 018 access road towards the cable-concrete crossing began eroding the native soil on the hillside in this area. Once the surface water drainage reached the base of the hill it would flow parallel with the creek (northerly) between the eastern

REGISTERED COMPANY FOR ISO 9001 ENGINEERING DESIGN

edge of the concrete lining and the native hillside, eroding a portion of the soil at the margin of the native soil and the beginning of the concrete placed within the creek channel.

In order to improve drainage in this area, and mitigate the potential for future erosion, GM placed additional concrete (approximately 9 cubic yards) atop a portion of the Spring 018 access road and down the hillside. This additional concrete will allow surface water drainage from the access road going up the hill and the Spring 018 access road to flow down the hillside atop the newly placed concrete and onto the previously concrete lined portion of the creek channel without encountering native soils. This work was performed on July 24, 2014. The added concrete is 6 – 8" in thickness and shaped to transmit surface water drainage from the access road and hillside to the previously concrete lined channel.

Prior to placement of the concrete the area was cleared of vegetation and graded. The concrete mixture used was similar to the concrete mixture utilized for the previous creek sealing (comprised of 4,000 psi standard Type II Portland Cement with fibrillated microsynthetic fibers (also known as fiber-reinforced concrete)). Photographs of the area prior to and after completion of the work, along with a drawing showing the location of the area are included in Attachment 1.

GM will continue to monitor the performance of the concrete sealing along the creek. If you have any questions regarding this Memorandum please contact Cheryl Hiatt at GM at your convenience.

Response to EPA Comments And Addendum No. 1 - December 12, 2014 Construction Certification Report Downstream Parcels Removal Action
(Attachments inserted within the report)

Memorandum

To:	Peter Ramanauskas, Brad Stimple, Jerry O'Callaghan	Ref. No.:	013968
From:	Jim McGuigan, Paul Gallaway/ac/786	Date:	December 9, 2015
cc:	Ed Peterson, Cheryl Hiatt, Katie Kamm		
Re:	**Response to U.S. EPA Comments And Addendum No. 1 - December 12, 2014 Construction Certification Report Downstream Parcels Removal Action**		

This Response to U.S. EPA Comments and Addendum No. 1 (Addendum No. 1) is submitted by GHD (formerly Conestoga-Rovers & Associates, Inc) on behalf of General Motors LLC (GM) to provide responses to specific comments from U.S. EPA on the Construction Certification Report - Downstream Parcels Removal Action (RA) (Certification Report), dated December 12, 2014, and amend the Certification Report. Attachments to this document are provided as an addendum to the Certification Report and supersede the items (i.e. table of contents, figures, and tables) from the December 12, 2014 submittal. A revised PDF of the Certification Report incorporating the revisions from Addendum No. 1 will be provided for download via email. Please consider updating hard copies using the provided attachments. Hard copies of the Certification Report will be printed by request.

Attachment 1 provides the redline text reflecting any new insertions, revision numbering and date changes to the Certification Report. A summary of the changes to the Certification Report are provided at the end of this memorandum.

Specific Comments

Comment 1:

Figure 3.1.1 identifies sample 013-0355 as apparently having a > 50 ppm concentration, yet the associated entry in the legend is missing.

GHD Response:

Updated figure included in Attachment 2.

Comment 2:

Investigative sampling Figures for P-30, 36, & 40 (Figures 3.1.14, 3.1.15, and 3.1.20) identify locations in blue shown to lie outside of the Proposed Limits of Excavation. Were those locations excavated?

GHD Limited
651 Colby Drive Waterloo Ontario N2V 1C2 Canada
T 519 884 0510 **F** 519 884 0525 **W** www.ghd.com

REGISTERED COMPANY FOR ISO 9001 ENGINEERING DESIGN

In looking over the Post Excavation Verification sample (e.g. Figures 4.2.11.1 through 4.2.11.8), it's hard to tell. Can GM can provide an overlay of the actual verification sampling grids over the Investigative Sample Locations to demonstrate that you excavated and confirmed over all of the original delineated areas and show how much additional removal and verification you had to do? For example, for Parcel 37, looking at Figure 3.1.17 and comparing to Figures 4.2.12.30 and 4.2.13.1, it's difficult to tell if the investigative sample location 037-11001 was covered by the post-excavation confirmation sampling grids.

GHD Response:

The limit as depicted is the initial limit utilized in the Downstream Parcels Removal Action Work Plan. This limit was surveyed onto the ground and was the starting point for the excavations. As 037-11001 was within the excavation limit it was excavated in the first pass. For the ≥1.8 mg/kg PCBs results outside of the limits on figures 3.1.14, 3.1.15 and 3.1.20, the limits were adjusted in the field as the additional delineation results were returned. As work progressed, additional samples were collected and modifications to the limit were made. As the excavation progressed, additional grids were added or existing grids expanded based on verification sample results communicated through the monthly and bi-monthly reporting.

Figures 3.1.1 through 3.1.21 have been updated with the verification grids to demonstrate that verification sampling grids extended to, or beyond, the limit of the proposed excavation limit and can be found in Attachment 2. The 4.2.0.1 series of figures also depict the grids at a scale generally closer to what was used for delineation figures.

Comment 3:

Referring to Section 4.4.2 and 4.4.3 for Stockpile Sampling Procedures for East Plant Area Grading Placement, please include a table of the results of such stockpile sampling. I believe GM at one time may have sent an interim table with such information, but as the project has concluded, all of the final information should be included in this report.

GHD Response:

Table of the stockpile sampling results is included as a new Table 4.6 to the Certification Report in Attachment 3.

Comment 4:

Figures 1.2.1 through 1.2.3 identify grey shaded properties such as Parcels 402, 403, 78, 79, etc. as Properties Retained by MLC following GMC bankruptcy (Managed by RACER Trust), although this does not seem to be correct. Please confirm which properties identified on these Figures are managed by RACER Trust.

***GHD* Response:**

More precisely, the grey Parcels represent the properties purchased and sold by General Motors Corporation (GMC) prior to the bankruptcy as well as those properties retained by Motors Liquidation Company (MLC) post-bankruptcy. The note in these figures has been updated and included in Attachment 2. GMC did not sell any of the properties it had purchased that were listed in the Downstream Parcels RA Work

Plan prior to the bankruptcy, therefore Parcels affected by this Certification Report, historically owned by GMC, were retained by MLC following the bankruptcy and later transferred to RACER Trust.

Comment 5:

Referring to verification Grid 16 and its associated data shown on Figure 4.2.1.1 and the Appendix D table for Verification Area 16 presenting the data used in the Bootstrap 95% UCL calculation, the difference in reported values between the Figure and the Appendix D table does not seem to be accounted for by the note "Concentrations of non-detect (U-qualified) data used in the 95% UCL calculations are one-half the Quantitation Limit." and General Note #5 on the Figure. For example, sample S-013-100604-CH-5933 and S-013-100604-CH-5937 are reported as having concentrations of 1.9 and 2.22J on Figure 4.2.1.1 but the UCL calculation reports 2.03 and 2.26, respectively. Using the data presented in Table 4.3.1, please show how the values used in Appendix D Verification Area 16 were calculated.

GHD Response:

The note considers two aspects of the data. Where an Aroclor is not detected, half the quantitation limit is used for Aroclors 1242, 1248, 1254 and 1260, and a 'zero' value is assumed for Aroclors 1016, 1221 and 1232. Using half the quantitation limit is a more conservative methodology than assuming zero for non-detects, as seen for the slight increase for the referenced samples. However, the results as reported include the reporting detection limit (that is the lower limit of the calibrated chromatograph curve) which is the validated result. The quantitation limit is the lowest detectable limit (e.g. the method detection limit). These values are not validated and so not normally reportable. The values are transferred to CRA from the laboratory using standardized Electronic Data Deliverables (EDD). The database is then provided to ENVIRON for analysis. See Table 1 for the sample quantitation limits, the detection limit and the reported total PCB calculations.

Comment 6:

Sample S-020-012106-KH-12031 is shown on Figure 4.2.4.2 as a Verification Area 34A floor sample and in the Appendix D 95% UCL calculation table for Verification Area 34. Please explain why also appears in the Appendix D Verification Area 35 table as a floor sample. It appears that Appendix D Verification Table 35 contains the data for Verification Area 34. Please confirm the data presented in both the 95% UCL calculation tables correctly reflects the samples in the Figures associated with the Verification Areas.

GHD Response:

Correct, the Verification Area 35 table was inadvertently populated with the Verification Area 34 data. The corrected table for Verification Area 35 is included in Attachment 4 and should replace the previously provided table. The UCL result matches the result presented in Figure 4.2.5.3 so no changes have been made to the Figure.

Comment 7:

The excavation floor sample results data boxes on Figures 4.2.11.6, 4.2.15.14, and 4.2.15.21 note "Final UCL Calculations Pending". Please update this Figure to reflect the UCL calculations for the respective Verification Areas.

GHD Response:

Figure 4.2.11.6 has been updated with the UCL results from verification areas 94 and 95 as were provided in Appendix D of the Certification Report.

Figure 4.2.15.14 has been updated to indicate that a UCL is not necessary. The sidewall represented by sample S-039-092608-MB-30844 was removed during the course of excavation, but this edit had not been included in a monthly report update. A response on this location based on field records was provided to a U.S. EPA contractor on September 29, 2009. The area covered by floor grids 269 A, B, E and F were completed under the Downstream Parcels RA Work Plan: Addendum No. 3. A note was added to the legend for these grids and for clarity and consistency the change was also applied to grids on Figures 4.2.15.10, 4.2.15.12, 4.2.15.16, and 4.2.15.17.

Figure 4.2.15.21 has been updated to indicate that a UCL for verification area 294 is unnecessary based on sample results.

The updated figures are included in Attachment 2.

Comment 8:

Referring to Figure 4.2.15.45, verification sample 373D does not appear as a "Final" sample on the figure, although the UCL calculation in Appendix D includes it. Please correct the figure.

GHD Response:

The corrected figure is included in Attachment 2.

Comment 9:

Referring to Figure 4.2.15.48, why were no floor verification samples collected from grids 390A/B/C while there was a floor sample collected at grid 390D?

GHD Response:

A soil ramp was constructed over the train trestle/rail tracks in this area to access the excavation areas downstream. The soil ramps were constructed prior to completion of the soil excavation downstream of the rail tracks, as this was the only access route for the contractor. The intent was to complete the excavation at this location as the restoration was being completed. GM LLC did not complete the restoration in this area, however, this figure and the data from this grid were conveyed to an MLC representative on July 9, 2010. These grids are located outside of the delineated excavation limits, the adjacent sidewall sampling was completed successfully, and the surrounding grids outside of the excavation were less than 1.8 mg/kg PCBs on first pass sampling. As a result, it is unlikely there is soil greater than 1.8 mg/kg PCBs in these grids.

Comment 10:

Could GM/CRA provide information on the amount of creek bed rock breaking that had to be performed due to the desire to remove impacted material found in bedrock fractures along the downstream parcels? For example: identifying where these rock breaking areas were located along the creek and how much rock GM ended up removing? It would be an in interesting/impressive piece of information, especially if you could describe a total for the entire off-site removal project (i.e. including upstream, P-22 and Northern & Western Tributaries (if any)).

GHD Response:

The volume of rock removed was not tracked separately from floodplain soils and sediment. Portions of the bedrock were removed from the creek bed starting with Bailey's Branch Creek adjacent to the East Plant Area (e.g. Site Source Control trenches at Parcels 3 and 205), with some bedrock removal required in most areas along the creek up to Broomsage road. The Spring 018 area had the greatest proportion of rock to soil ratio removed due to the bedrock removal at swallets and springs, however, small quantities of bedrock were removed as far downstream at Parcel 30 where the main channel passed next to the valley wall. The total soil and rock mass removed from the Downstream Parcels was an estimated 1.2 million tons.

Downstream Parcels Construction Certification Report Addendum No. 1 Summary of Changes

Attachment 1

- Cover Page and Table of Contents and Text – Updates to reflect new revision number and date for the report. Inclusion of Table 4.6 and text reference, stockpile sampling results table, and insertion of this Memorandum text as Appendix J.

Attachment 2

- Figures 1.2.1, 1.2.2 and 1.2.3 – Revision of note for properties previously sold by GMC or
- Figures 3.1.1 through 3.1.21 – Update to legend item of figure 3.1.1 for ≥50 mg/kg PCBs sample result. Inclusion of verification grids to all 3.1.x figures.
- Figure 4.2.11.6 – Added UCL calculation results to figure.
- Figures 4.2.15.10, 4.2.15.12, 4.2.15.16, and 4.2.15.17 – Added note regarding grids addressed by Downstream Parcels RA: Addendum No. 3 prescriptive removal.
- Figure 4.2.15.14 – Removed note indicating pending UCL calculation and added note regarding grids addressed by Downstream Parcels RA: Addendum No. 3 prescriptive removal.
- Figure 4.2.15.21 – Removed note indicating pending UCL calculating.
- Figure 4.2.15.45 – Added Grid 373D floor sample to final list.
- Figure 4.2.15.48 – Added note indicating status of Grids 390A, 390B, and 390C as of July 9, 2010.

Attachment 3

- Table 4.6 – Stockpile Sample Analytical Results Summary for stockpiling conducted during Downstream Parcels work.

Attachment 4

- Verification Area 35 UCL Calculation Table – updated with the correct data to replace this Appendix D table.

Table 1

UCL Calculation Half Quantitation Limit Examples

Notes:

Reporting Detection Limit Summing presents the result calculation as presented on CRA tables and figures.
Quantitation Limit for UCL Summing presents the result calculation as used by ENVIRON for the Upper Confidence Limit Calculations.
The Quantitation Limit values presented are not validated and not reported individually as a result.
